

Fantastic Food

Stage 4 Technology Mandatory | Teacher guide to the 50-page student workbook

Use the current source

COURSE

<https://stevenccowell.github.io/Fantastic-Food/>

WORKBOOK SCOPE

Five modules, 15 named sections, ten applied activities and eight folio stages are mapped to the student book.

PAPER AND ONLINE CHECKS

Each paper check uses questions 1-3 of its corresponding ten-question online section check, with the options in the site's source order. Questions 4-10 remain online.

PRACTICAL RECIPE AUTHORITY

Before each practical, issue or display the current teacher-approved recipe and local procedure. Check ingredients, quantities, yield, equipment, timing, allergens and safe method against that master; the workbook deliberately supplies none of these as cooking instructions. Do not use an older booklet to resolve a conflict silently.

ASSESSMENT AUTHORITY

Use the current teacher-issued assessment notices and Classroom instructions for due dates, marks, submission and permitted assistance. The workbook is learning and evidence support, not a replacement notice.

SAFETY AUTHORITY

Local school procedures, the teacher's demonstration and supervision govern all practical work. Students stop, make the area safe as directed, and ask the teacher whenever a hazard, hygiene break, allergen concern or uncertainty appears. Do not infer a practical permission from an illustration.

courseDataSourceContract: sha256:c228cb837ab0f5e880b31d930e44d6a7120ecec5e775792375e33317200c4e13

Using the book

Read the facing explanation before a section check. Use the three printed answers diagnostically; the written response should show a decision and a reason, not copied model wording.

Accept accurate alternatives to the indicative written responses. Look for specific evidence, sound reasoning and safe acknowledgement of teacher directions rather than one exact sentence.

Use the ten applied activities to collect decision, reason and reflection evidence. A planned or predicted result must not be presented as an observation from a completed practical.

For food and health discussion, teach the Australian Guide to Healthy Eating as an overall guide. Avoid prescribing individual diets, moralising foods, asking students to disclose health information, or grading the contents of a real lunchbox.

Paper evidence may be handwritten, typed in the editable copy, orally explained and scribed, or drawn and labelled when that gives equivalent access. Do not require identifying student photographs; a non-identifying sketch or teacher-observed note can serve the same evidence purpose.

For duplex printing, use A4 portrait, actual size, long-edge binding and all 50 pages. Keep a separate teacher guide; do not include answer pages in student copies. Check the first duplex sheet before a class run.

Before a practical

Confirm the current teacher recipe, the room procedure, supervision, allergens and available equipment. The hypothetical 100 mL water example on student page 15 teaches unit-to-tool reasoning; it is not a class recipe quantity.

01 Work safely

Answer key and indicative written-response guidance

PAGE 4 / Ready to Work Safely in Food Technology

1. A - Preparing to work safely and follow directions | 2. B - Something that could cause harm or create an unsafe situation | 3. C - To prepare students for workshop safety

WRITTEN PROMPT

Explain what you should do if you notice a possible hazard or become unsure during a practical Food Technology lesson, and explain why this response is important.

INDICATIVE RESPONSE

If I become unsure during practical work, I should stop before acting and ask the teacher what to do. This helps me avoid guessing and makes sure I follow the correct directions for the situation.

LOOK FOR

Stop before acting, alert or ask the teacher, and explain that guessing could increase risk.

PAGE 6 / Personal Hygiene for Safe Food Work

1. C - Personal actions can affect how hygienically food is prepared | 2. D - Something unwanted is transferred to food or a food-preparation surface | 3. A - Following the teacher's personal-readiness and hygiene routine

WRITTEN PROMPT

Choose one personal hygiene habit involving hands, hair, clothing or unnecessary touching. Explain how it helps protect food, then explain what you should do if that hygiene habit is interrupted during practical work.

INDICATIVE RESPONSE

A useful hygiene habit is paying attention to what you touch while preparing food. This reduces unnecessary opportunities for contamination to be transferred. If I realised my hygiene had been interrupted, I would pause and follow the teacher's directions to restore it before continuing.

LOOK FOR

One concrete hygiene habit, a plausible contamination pathway, and a pause-and-restore response under teacher direction.

PAGE 8 / Kitchen Hygiene, Hazards and Washing Up

1. A - Keeping surfaces, equipment and work patterns clean and organised | 2. B - Something that could cause harm or create an unsafe situation | 3. C - Allowing unnecessary mess to build up while working

WRITTEN PROMPT

Imagine you notice a possible hygiene issue or hazard during practical food work. Explain how you should respond, then explain why washing up and leaving an orderly area are still important before the practical is complete.

INDICATIVE RESPONSE

If I noticed something that might be unsafe, I would stop and tell the teacher rather than trying an unfamiliar solution myself. After the food work, I would still complete the directed washing-up routine because leaving the equipment and work area orderly is part of completing the whole practical.

LOOK FOR

Immediate safe escalation and clean-down as part of the whole practical, not an optional afterthought.

02 Recipes and nutrients

Answer key and indicative written-response guidance

PAGE 14 / Reading Recipes: Scones and Savoury Twists

1. C - Read the recipe before starting | 2. D - What ingredients are required | 3. A - They show how much of each listed ingredient is required

WRITTEN PROMPT

Explain why reading the whole method before starting a practical can help you work in the correct sequence, stay organised and make safer decisions.

INDICATIVE RESPONSE

Reading the full method gives a cook an overview of the order of the practical before work begins. This makes it easier to follow the current sequence instead of relying on memory. If something is unclear, the cook can stop and ask before continuing.

LOOK FOR

Read the current entire method, identify the sequence and pause to clarify uncertainty.

PAGE 16 / Accurate Measuring and Managing a Practical

1. A - Using the quantities and units on the current recipe carefully | 2. B - They can affect consistency and create unnecessary waste | 3. C - The quantity and unit shown on the current recipe

WRITTEN PROMPT

Explain a useful check-before-mixing routine and how accurate measuring can support a more consistent practical result while reducing unnecessary waste.

INDICATIVE RESPONSE

A careful cook first reads the quantity and unit, then chooses a suitable provided measuring tool. Before combining ingredients, the cook checks the measurement against the current recipe. This can reduce avoidable errors and helps the practical result stay more consistent.

LOOK FOR

Quantity and unit read from the approved recipe, suitable provided tool, a check before combining, and a consistency or waste reason.

PAGE 18 / The Six Essential Nutrients

1. C - Carbohydrates, protein, fats, vitamins, minerals and water | 2. D - Carbohydrates and fats | 3. A - Supporting growth and repair

WRITTEN PROMPT

Explain how several nutrient groups support different body needs and why eating a variety of foods can be useful.

INDICATIVE RESPONSE

Carbohydrates and fats can provide energy, while protein supports growth and repair. Vitamins, minerals and water support other body needs such as normal body processes and hydration. Because foods can provide different combinations of nutrients, including a variety of foods can help provide a broader range.

LOOK FOR

Several correctly matched nutrient functions and a variety argument without claiming one food provides everything.

03 Plan and adapt

Answer key and indicative written-response guidance

PAGE 24 / Workflow Planning in the Kitchen

1. A - An organised plan for moving from preparation to a finished product and clean work area | 2. B - To understand the overall sequence and how tasks connect | 3. C - A task that relies on another task being completed first

WRITTEN PROMPT

Explain how you would organise a simple kitchen workflow so that dependent tasks happen in a logical order, progress is checked and clean-up is included.

INDICATIVE RESPONSE

A well-organised workflow begins by identifying which tasks depend on earlier work. The cook then follows a logical sequence and uses waiting time only for suitable tasks that do not disrupt the recipe. Progress is checked before moving on, and clean-up is included as the final part of completing the practical.

LOOK FOR

At least one dependency, sensible use of waiting time, a progress check and final clean-up.

PAGE 26 / The Australian Guide to Healthy Eating and Adolescent Needs

1. C - The relative place of five food groups across an overall eating pattern | 2. D - Vegetables and legumes/beans | 3. A - Grain foods, mostly wholegrain and/or high cereal fibre varieties

WRITTEN PROMPT

Explain how variety across the five food groups can support an adolescent's different needs without giving a personalised eating prescription.

INDICATIVE RESPONSE

A varied eating pattern can include foods from several food groups, which can contribute nutrients used for energy, growth and normal body processes. Looking across the whole pattern is more useful than judging one food or meal. Exact needs can differ between people, so the guide should not be treated as one fixed eating plan for everyone.

LOOK FOR

Several food groups, broad nutrient roles and an explicit whole-pattern rather than personal-prescription view.

PAGE 28 / Recipe Modification: Bread Cases and Garlic Cheese Flatbread

1. A - Identify a clear reason or goal for the change | 2. B - To meet a clearly stated design goal | 3. C - Teacher directions and the current recipe

WRITTEN PROMPT

Propose a teacher-permitted type of recipe modification for a stated user or nutritional goal without naming a specific ingredient change. Explain one effect you would predict and one question you would use to evaluate the result.

INDICATIVE RESPONSE

A designer might aim to make a food idea more suitable for a stated user and propose one permitted change. The designer could predict that the change may affect a sensory quality or the preparation process. After producing the food, an evaluation question could ask whether the finished result still suited its intended role while meeting the original goal.

LOOK FOR

A stated user or goal, teacher permission, one labelled prediction and a question answerable from later evidence.

04 Design for a user

Answer key and indicative written-response guidance

PAGE 34 / Planning a Balanced Lunchbox

1. C - Consider the intended user and school day | 2. D - Including a range of foods across different food groups | 3. A - Fruit

WRITTEN PROMPT

Plan a lunchbox for a stated user and school day. Explain how your plan includes variety across food groups, how it is practical for the situation and one improvement you would consider after reviewing the whole lunchbox.

INDICATIVE RESPONSE

A lunchbox designer might choose a range of foods from several food groups and include water as the preferred drink. The choices should suit the intended person and be practical to manage during their school day. After reviewing the whole plan, the designer might identify one area where greater variety or practicality could be considered.

LOOK FOR

A fictional or consented intended user, food-group variety, practical school-day reasoning and one specific revision.

PAGE 36 / Food Orders and Practical Organisation

1. A - To communicate what is needed for an approved practical plan | 2. B - The current teacher-approved recipe or plan | 3. C - To find possible missing, duplicated or inaccurate entries

WRITTEN PROMPT

Explain how you would create and check a food order from an approved practical plan, and describe how the completed order connects to practical workflow and responsible resource use.

INDICATIVE RESPONSE

A careful student would create the order directly from the current approved plan and then compare every entry with that source. The student would check names, quantities and possible missing or duplicated items. An accurate order supports workflow because the resources needed for the planned production have been considered before practical work begins.

LOOK FOR

Direct use of the current approved plan, names and quantities checked, and a workflow or waste rationale.

PAGE 38 / Coconut Balls Practical and Healthier Fast-Food Redesign

1. C - It records what was actually seen or done | 2. D - Describe the qualities you actually observe after completing the practical | 3. A - Define the intended user and purpose

WRITTEN PROMPT

Explain one criterion you would use when planning a healthier fast-food redesign for a stated user, predict one possible effect of a teacher-permitted change, and explain how you would evaluate whether the proposal met its goal.

INDICATIVE RESPONSE

A designer could set a criterion that the proposed food suits the intended user while considering variety and practicality. A permitted change might affect the sensory qualities or preparation, so the designer would describe that effect as a prediction rather than a certainty. The final proposal or tested result could then be compared with the original criterion to decide what worked and what might be improved.

LOOK FOR

One testable criterion, a clearly labelled prediction, and comparison to observed or tested evidence.

05 Evaluate and communicate

Answer key and indicative written-response guidance

PAGE 44 / Fibre and Water for Healthy Bodies

1. A - Parts of plant foods that are not fully digested | 2. B - Normal digestive function | 3. C - Vegetables, fruit, legumes and wholegrain or high-fibre grain foods

WRITTEN PROMPT

Explain how fibre and water support different body functions and describe how both can be considered as part of a varied overall food pattern.

INDICATIVE RESPONSE

Fibre from a range of plant foods supports normal digestive function, while water supports hydration and other normal body functions. They do different jobs, so one does not replace the other. Looking across a varied eating pattern is more useful than expecting one food or drink to meet every need.

LOOK FOR

Different roles for fibre and water, example plant-food sources and overall pattern reasoning.

PAGE 46 / Fettuccine Carbonara: Sequencing and Safe Workflow

1. C - Read the complete current teacher-master recipe | 2. D - To understand the sequence and identify dependent steps | 3. A - A step that relies on another part of the practical being ready first

WRITTEN PROMPT

Explain how you would organise the Fettuccine Carbonara practical using the current teacher recipe, including dependent steps, progress checks and one evidence-based improvement for future practical work.

INDICATIVE RESPONSE

A careful student would read the whole current method first and identify which parts rely on earlier tasks being ready. During the practical, the student would check the recipe at key points and stop to ask if the sequence became unclear. Afterward, the student could use evidence from the workflow to identify one organisation habit that may improve the next practical.

LOOK FOR

Dependencies based on the actual current master, checks during work, safe clarification and one evidence-based improvement.

PAGE 48 / Evaluating Food Solutions and Course Learning

1. A - To judge how well it met its purpose and criteria | 2. B - To provide clear features for judging the result | 3. C - I checked the current recipe before moving to the next stage

WRITTEN PROMPT

Evaluate your communication tool for adolescents. Judge its appeal, ease of use and suitable content. Support your judgements with evidence from the tool and suggest one improvement.

INDICATIVE RESPONSE

The communication tool is appealing because its home or title page has a clear purpose and introduces the information for adolescents. It is easy to use when the information about nutrient functions and sources and the healthier fast-food redesign can be understood clearly. The content is suitable because it focuses on nutritional requirements and healthy choices for adolescents. One improvement would be to make a section clearer if its information is difficult to find or understand.

LOOK FOR

Judgements of appeal, navigation/usability and suitable content, each grounded in a feature, plus a targeted improvement.

Applied activities

Use these to notice a decision, a reason and a specific reflection. A prediction is not completed practical evidence.

ACTIVITY 01 / Safety and hygiene scan / pages 9, 10

Ask students to distinguish a possible hazard from an interrupted hygiene routine. Both require a pause, teacher notification or clarification, and only the directed next action.

Evidence: One observed or plausible issue, a safe decision, a reason linked to food or people, and a follow-up routine.

ACTIVITY 02 / Lemonade Scones workflow / pages 19, 21

Supply the current approved Scones recipe. Have students extract the real sequence and identify one check point; verify any yield or method ambiguity in the master before practical work.

Evidence: Steps and measurements trace to the issued master, with observation separated from prediction.

ACTIVITY 03 / Nutrient connections / pages 20

Have students connect at least three named nutrient groups to broadly accurate roles and food sources, then explain why variety matters. Do not turn this into personalised diet advice.

Evidence: Accurate nutrient-role-source connections and reasoning beyond a list of foods.

ACTIVITY 04 / Savoury Twists team plan / pages 29

Provide the approved current practical. Allocate roles and handovers in a sequence the method permits; pause the plan when a task depends on another person or earlier step.

Evidence: Specific role, dependency, handover/check and final cleaning responsibility.

ACTIVITY 05 / Bread Cases nutrition review / pages 30

Use the teacher-provided Bread Cases recipe, not an assumed ingredient list. Discuss what the actual recipe contributes to a varied overall adolescent food pattern, then consider a permitted design goal.

Evidence: A factual observation about the issued recipe, a reasoned nutrition connection and a non-judgemental next-step idea.

ACTIVITY 06 / Garlic Flatbread process check / pages 31

Check the current flatbread master and demonstrate the local method. Students track the stated mixing, resting, shaping and baking sequence only as directed; they record a progress check and a change if one really occurred.

Evidence: A sequence tied to the master and a real observation, not invented times or outcomes.

ACTIVITY 07 / Healthy fast-food redesign / pages 39

Set an intended adolescent user and a testable criterion. Invite a teacher-permitted modification and a prediction, then compare the proposal or tested product with the criterion; do not claim untested sensory results.

Evidence: User, goal, permitted change, predicted effect and evaluation evidence are each distinct.

ACTIVITY 08 / Adolescent lunchbox plan / pages 40, 41

Supply the current teacher-issued selection list. A fictional user is suitable. Check broad food-group variety, practicality across the stated school day and whether any proposed practical/order has been approved.

Evidence: A justified plan and one revision based on stated criteria, not a judgement about a student's actual food.

ACTIVITY 09 / Fibre and water pattern check / pages 49

Use a hypothetical eating pattern to compare fibre's digestive role with water's hydration role. Accept varied examples from plant foods and a whole-pattern explanation.

Evidence: Distinct functions for fibre and water and a practical, non-prescriptive improvement.

ACTIVITY 10 / Carbonara and final evaluation / pages 50

Use the current approved Carbonara master and local demonstration. Have students compare their actual workflow and finished result with their plan, then evaluate how clearly their communication tool serves adolescents.

Evidence: Observed evidence, one justified improvement and an honest audit of missing folio evidence.

Folio evidence

These eight stages are represented across the 50 student pages. Accept equivalent non-identifying evidence where appropriate.

STAGE 1 / Kitchen-ready routine / pages 10, 11, 12

A before-work routine, one interrupted-hygiene or hazard response, and why the response protects people or food. Stop-and-ask must be explicit when uncertain.

STAGE 2 / Recipe and measuring check / pages 21, 22

A short sequence showing how the issued recipe was read, how a quantity and unit were checked with a suitable tool, and the decision before ingredients were combined.

STAGE 3 / Nutrition connections / pages 20, 22

At least three accurate connections between nutrient groups, fibre or water and different body needs, with variety explained rather than one ideal food asserted.

STAGE 4 / Practical workflow plan / pages 29, 32

A preparation-to-clean-up sequence with one dependency, one progress check, a realistic handover or overlap, and a final clean-up action.

STAGE 5 / Food solution: user and criteria / pages 39, 40, 41

A stated adolescent user and situation with three testable criteria covering variety, practicality, appeal or ease of use. A fictional user is acceptable.

STAGE 6 / Organisation and food order / pages 41

Every item and quantity must trace to the teacher-approved plan. Look for a checked order and an explanation of how it supports the intended workflow.

STAGE 7 / Practical evidence and reflection / pages 42, 50

A factual observation, comparison with the plan or criteria, acknowledgement of what changed, and one justified next-step improvement.

STAGE 8 / Communicate and evaluate / pages 48, 50

A page or navigation plan for an adolescent audience, plus evidence-based judgements on appeal, ease of use and suitable content, ending with one specific usability improvement.

Final teacher checks

Confirm each printed paper question and option order against the frozen course data before using this key.

Check all practical pages against the current teacher masters and local school safety/allergen procedures before students work with food.

Review current assessment notices separately; no historical date, mark or submission condition in this guide should be inferred as current.

Collect only the evidence required locally. The course site's saved responses remain on the student's device unless separately printed or submitted through a teacher-approved channel.
