

The Riv Burger

Student workbook / read, design, make and evaluate

NAME _____

CLASS _____

A purposeful burger, from brief to evidence

Work through the ten course modules, then gather your best evidence in the final folio. Use the teacher's current brief, recipe, safety directions and assessment instructions wherever local details differ.

01	The challenge	03-06
02	Safe food practices	07-10
03	Tools and workflow	11-14
04	Burger anatomy	15-18
05	Ingredients and agriculture	19-22
06	Develop your design	23-26
07	Garden to kitchen	27-30
08	Plan production	31-34
09	Produce and present	35-38
10	Evaluate and reflect	39-42

FINAL PROJECT FOLIO

Eight evidence pages / pages 43-50

Teacher to confirm: current ingredients, quantities, allergens, equipment settings, practical method, due dates and submission route.

The challenge

Understand the design situation before proposing a solution.

1.1 DESIGN SITUATION AND BRIEF

A design situation explains the need or opportunity. In this unit, a small local food business wants a burger that appeals to young people while showing that fresh, local and more sustainable choices can compete with familiar fast-food products.

The design brief turns that situation into action: develop a signature burger featuring locally grown produce and home-grown herbs. Your solution needs to be realistic for a school food-technology setting.

Illustrative design setting; the current teacher brief controls the task.

1.2 USERS AND NEEDS

A successful burger is designed for people, not only for a photograph. A young customer may value flavour, appearance, value, convenience and a size that is comfortable to hold and eat. The cook needs a clear recipe, safe method, suitable tools and enough time.

These needs can compete. Extra height may look impressive but reduce ergonomics. Many fillings may add flavour but make production slower and the burger unstable.

1.3 CRITERIA AND CONSTRAINTS

Criteria are the qualities used to judge success: function, appearance, creativity, ergonomics, ethical choices, environmental impact and time management. Constraints are real limits such as lesson time, available equipment, ingredient access, budget, skills, safety and dietary needs.

Design habit: write criteria so they can be tested. "Easy to hold without fillings falling out" is more useful than "good".

PAUSE AND APPLY

Name the intended user and one testable quality of the burger.

Check the ideas

Circle the best answer. Return to the reading if an option sounds plausible but is incomplete.

01 What is the main purpose of a design brief?

- ☐ A. To list every ingredient immediately
- ☐ B. To turn a need or opportunity into a clear design task
- ☐ C. To guarantee the first idea will work

02 Which statement is a testable design criterion?

- ☐ A. The burger is nice
- ☐ B. The burger uses food
- ☐ C. The burger can be held and eaten without the fillings falling out

03 Which is most likely a constraint in a school practical?

- ☐ A. The available lesson time
- ☐ B. The colour of the heading on this page
- ☐ C. Whether burgers exist

04 Why can a very tall burger create a problem?

- ☐ A. Height always removes flavour
- ☐ B. It can reduce comfort and stability for the user
- ☐ C. It makes food hygiene unnecessary

05 Who should be considered when designing the solution?

- ☐ A. Only the person taking a photo
- ☐ B. The customer and the person producing the burger
- ☐ C. Nobody until after production

06 A student writes "My burger will be nice." What should happen next?

- ☐ A. rewrite it as a specific observable quality
- ☐ B. use "good" as the only success measure
- ☐ C. ignore the issue and remove it from the record

EXPLAIN ONE DECISION

Choose one answer above. What evidence from the reading, image or your own planning supports it?

Busy Work, then transfer

Use the two paper activities to rehearse the course vocabulary. Show your thinking, not only a final word.

PRACTICE 1 / DESIGN LANGUAGE FIND-A-WORD

F U N C T I O N K B Q
R C W N N T N K E F Y
O K E V I D E N C E N
D N S O A Z O A S I D
R W G Q R V M M B R M
C C R I T E R I A B K
H S U A S V S N I R N
Q K K R N E H U N U M

TRANSFER

Where could this vocabulary or decision matter in your own burger design?

THE RIV BURGER / STAGE 4

05 / 50

Brief and criteria studio

Translate the design situation into student language, then write criteria you can actually test.

BRIEF IN YOUR OWN WORDS
Name the product, intended user, local produce and home-grown herb requirement.

Testable success criterion	How I will check it

TWO REAL CONSTRAINTS

Safe food practices

Protect people by controlling hygiene and food-production risks.

2.1 PERSONAL HYGIENE

Food handlers can transfer microorganisms, hair, dirt and allergens to food. Before production, secure hair, remove or control jewellery as directed, cover cuts, wear the required protective clothing, and wash hands thoroughly with soap and running water before drying them. Wash hands again after touching raw food, waste, your face or hair, and after any task that may contaminate them.

Illustrative food-safety setting; follow the local teacher procedure.

2.2 CROSS-CONTAMINATION

Cross-contamination happens when harmful microorganisms or allergens move from one food, surface, tool or person to another. Keep raw ingredients separate from ready-to-eat foods. Use the colour-coded boards and equipment directed by your teacher, clean and sanitise work areas, and never reuse a utensil that has touched raw food without washing it correctly.

Non-negotiable: follow teacher instructions for storage, cooking, cooling and allergen controls. If unsure, stop and ask.

2.3 HAZARDS AND CONTROLS

A hazard is something with the potential to cause harm. A risk control reduces the chance or severity of that harm. Knife controls include a stable board, correct grip, a safe cutting technique, full attention and carrying the knife only as instructed. Heat controls include dry oven mitts, clear handles and warning others about hot equipment. Safety also includes garden work: use gloves and follow instructions when handling potting mix, minimise dust, work in ventilation and wash hands afterwards.

PAUSE AND APPLY

Name one contamination path and a control for it.

Check the ideas

Circle the best answer. Return to the reading if an option sounds plausible but is incomplete.

01 When should hands be washed again during a practical?

- ☐ A. After touching raw food or waste
- ☐ B. Only when the lesson ends
- ☐ C. Only if the teacher is watching

02 What is cross-contamination?

- ☐ A. A burger with two sauces
- ☐ B. The transfer of harmful microorganisms or allergens
- ☐ C. Cooking two items at once

03 Which action best controls a knife hazard?

- ☐ A. Cut quickly on a moving board
- ☐ B. Use a stable board and the instructed technique
- ☐ C. Leave the knife hidden in washing-up water

04 What should you do if an allergen requirement is unclear?

- ☐ A. Guess from the packaging colour
- ☐ B. Continue and fix it later
- ☐ C. Stop and ask the teacher

05 Which is a suitable potting-mix control?

- ☐ A. Create as much dust as possible
- ☐ B. Follow instructions, minimise dust and wash hands
- ☐ C. Eat while filling pots

06 A chopping board slides while a student is cutting. What should happen next?

- ☐ A. stop and stabilise the board before continuing with the instructed technique
- ☐ B. name a hazard without changing how the task is performed
- ☐ C. ignore the issue and remove it from the record

EXPLAIN ONE DECISION

Choose one answer above. What evidence from the reading, image or your own planning supports it?

Busy Work, then transfer

Use the two paper activities to rehearse the course vocabulary. Show your thinking, not only a final word.

PRACTICE 1 / FOOD-SAFETY CLUE CHALLENGE

Use each word once: ALLERGEN, CLEAN, CONTROL, HAZARD, HYGIENE, SEPARATE.

A1 Free from visible dirt and unwanted contamination.

A5 A substance that can trigger an allergic reaction.

D1 An action used to reduce a risk.

D2 Keep raw and ready-to-eat food apart.

D3 Personal and workplace practices that help keep food safe.

D4 Something with the potential to cause harm.

PRACTICE 2 / HAZARD-CONTROL MATCH

Match A-F to 1-6. A raw food and salad share board; B spill in walkway; C wet mitt/hot tray; D label unchecked; E knife hidden in sink; F loose hair. 1 wash knife safely; 2 tie hair; 3 separate clean tools; 4 check label/allergen process; 5 clean spill/warn; 6 use dry mitt.

REASONS / EVIDENCE NOTES

RESPONSES

A

F

TRANSFER

Where could this vocabulary or decision matter in your own burger design?

Safety scenario lab

For each situation, identify the hazard or contamination path and give a specific control.

Situation / hazard	Specific control / stop-and-ask point
Raw patty and salad share a board	
Wet mitt beside a hot tray	
Spill left in the walkway	
Allergen or label uncertainty	
Cleaning and pack-up	

The current teacher procedure controls the actual practical. Do not infer food safety from a photograph.

Tools and workflow

Prepare an efficient workstation and use tools for their intended purpose.

3.1 MISE EN PLACE

Mise en place means putting everything in place before production. Read the complete method, wash hands, sanitise the bench, collect and check equipment, measure ingredients, prepare waste containers and preheat equipment only when instructed.

This preparation reduces rushing and helps you notice missing ingredients or unsafe conditions before they become problems.

Illustrative workstation; select tools from the approved recipe.

3.2 SELECTING TOOLS

Select a tool because its function suits the job. A cook's knife can chop larger ingredients; a small knife provides control for smaller preparation; measuring spoons suit small quantities; a digital scale measures mass; and a spatula can turn a patty while keeping hands away from heat.

Use every tool only after demonstration and according to classroom rules.

3.3 A CLEAN WORKFLOW

Plan movement from preparation to cooking, assembly and cleaning. Keep handles away from bench edges, wipe spills promptly, return ingredients to safe storage, and clean as you go without placing sharp tools into hidden washing-up water.

At the end, wash, rinse and dry equipment as directed, sanitise the workstation and complete the teacher's practical checklist.

PAUSE AND APPLY

What is one check you must make before cooking begins?

Check the ideas

Circle the best answer. Return to the reading if an option sounds plausible but is incomplete.

01 What does mise en place achieve?

- ☐ A. It organises ingredients, equipment and tasks before cooking
- ☐ B. It replaces the recipe
- ☐ C. It means washing only after cooking

02 Which tool directly measures mass?

- ☐ A. Measuring spoon
- ☐ B. Digital scale
- ☐ C. Spatula

03 Why read the whole method before starting?

- ☐ A. To spot the sequence, equipment and timing needs
- ☐ B. To avoid measuring ingredients
- ☐ C. To make every step optional

04 Where should a sharp knife be placed during cleaning?

- ☐ A. Hidden in cloudy sink water
- ☐ B. In the safe location directed by the teacher
- ☐ C. Under a tea towel

05 Which action supports an efficient workflow?

- ☐ A. Leave every spill until the end
- ☐ B. Move pan handles over the bench edge
- ☐ C. Clean as you go and keep movement paths clear

06 A spill appears beside the main movement path. What should happen next?

- ☐ A. make the area safe and clean the spill promptly
- ☐ B. hide sharp tools in washing-up water
- ☐ C. ignore the issue and remove it from the record

EXPLAIN ONE DECISION

Choose one answer above. What evidence from the reading, image or your own planning supports it?

Busy Work, then transfer

Use the two paper activities to rehearse the course vocabulary. Show your thinking, not only a final word.

PRACTICE 1 / MISE EN PLACE SHUFFLE

Number a safe setup sequence 1-8: A gather approved ingredients/tools; B read recipe and teacher directions; C begin workplan task; D wash hands; E check bench/hazards; F measure ingredients; G confirm boards/knives; H keep bench organised. Why read the plan first?

TRANSFER

Where could this vocabulary or decision matter in your own burger design?

Practical readiness checklist

Turn the supplied practical checklist into a routine you can follow without rushing.

List six actions before cooking, four controls during cooking and six actions for cleaning and pack-up. Use the current teacher procedure.

Before cooking / 6 actions	During cooking / 4 controls	Cleaning and pack-up / 6 actions

STOP AND ASK THE TEACHER WHEN...

Burger anatomy

Use structure and sensory properties to make the product work.

4.1 A LAYERED FOOD SYSTEM

A burger is a system of interacting parts. The bun contains the product and gives structure. The main filling provides body and a central flavour. Fresh components add colour, texture and freshness. Sauces add moisture and flavour but can also make the bun soggy. Each layer affects the whole product.

- 1 Top bun: hold and protect
- 2 Fresh layer: colour and crunch
- 3 Sauce: flavour and moisture
- 4 Main filling: body and protein
- 5 Base bun: stable foundation

Illustrative burger layers; your own design needs testing.

4.2 SENSORY PROPERTIES

Sensory properties are features detected by the senses: appearance, aroma, flavour, texture and sound. Designers can create contrast—such as a crisp vegetable with a soft bun—but too many competing flavours or textures can make the product confusing.

Use precise words in evaluation: golden, crisp, juicy, smoky, fresh, balanced or overly salty are more useful than “good”.

4.3 FUNCTION AND STABILITY

Place wet ingredients away from surfaces that become soggy quickly, drain washed vegetables, match the bun size to the filling, and avoid layers that slide against each other. The base should sit flat and the assembled burger should remain comfortable to hold.

A product can look appealing and still fail if it collapses, leaks or is difficult to eat.

PAUSE AND APPLY

Name one layer and explain how it helps the burger work.

Check the ideas

Circle the best answer. Return to the reading if an option sounds plausible but is incomplete.

01 What is a main function of the bun?

- ☐ A. To remove every flavour
- ☐ B. To contain the product and provide structure
- ☐ C. To make hygiene optional

02 Which is a sensory property?

- ☐ A. Aroma
- ☐ B. Submission date
- ☐ C. Desk number

03 Why should washed vegetables be drained?

- ☐ A. To reduce excess moisture and sogginess
- ☐ B. To remove all texture
- ☐ C. To make the burger taller

04 Which evaluation is most precise?

- ☐ A. It was good
- ☐ B. The crisp lettuce contrasted with the soft bun
- ☐ C. I liked it

05 Which change is most likely to improve stability?

- ☐ A. Match bun and filling sizes
- ☐ B. Add every possible sauce
- ☐ C. Stack slippery layers without a plan

06 The filling slides out when the burger is lifted. What should happen next?

- ☐ A. adjust component size, surface contact or layer order
- ☐ B. stack several wet, sliding layers directly on the base
- ☐ C. ignore the issue and remove it from the record

EXPLAIN ONE DECISION

Choose one answer above. What evidence from the reading, image or your own planning supports it?

Busy Work, then transfer

Use the two paper activities to rehearse the course vocabulary. Show your thinking, not only a final word.

PRACTICE 1 / BURGER LAYER FIND-A-WORD

R O J M N R B Z X L P
H N Q K F I H Y H E F
C G G V R Y A T B I L
N R U A W G A I L P A
U E F P M V D L C G V
O T X Q W O I I Y H O
U R E Y E N R B S S U
I G T E G X Q A B E R
I O X V T E X T U R E
T W O E C U A S N F E
K K O C K D L L S H C

Find these words: STABILITY, FILLING, TEXTURE, FLAVOUR, SAUCE, FRESH, AROMA, BUN.

Which two affect ease of holding?

YOUR RESPONSE

PRACTICE 2 / STACK STABILITY TROUBLE-SHOOTER

For each problem, propose the best first design response and explain why: 1 filling slides out; 2 bun becomes soggy; 3 every layer feels soft; 4 burger too tall for its user. Consider layer order, moisture, texture and ergonomics.

REASONS / EVIDENCE NOTES

RESPONSES

1 _____
2 _____
3 _____
4 _____

TRANSFER

Where could this vocabulary or decision matter in your own burger design?

Burger deconstruction lab

Deconstruct a burger into functional layers, then consider taste, nutrition, appearance, price and stability.

DRAW AND LABEL A STABLE BURGER LAYER ORDER

Show the role of each layer: structure, flavour, moisture, texture and ease of eating.

Feature	Choice or evidence	Problem / response
Taste / flavour		
Nutrition / dietary fit		
Appearance		
Price / supply		
Stability / function		

Ingredients and agriculture

Trace ingredients to industries, producers and places.

5.1 FROM PRIMARY PRODUCTION TO PLATE

Agriculture supplies plant and animal products. Wheat may be milled into flour for buns; cattle or legumes may supply a patty ingredient; dairy farming supplies milk for cheese; and horticulture supplies vegetables and herbs. Processing, packaging, transport, retail and food service connect primary production to the burger.

CHECK THE ORIGIN CLAIM

- 1 Named NSW producer and place
- 2 Production and processing journey
- 3 Current source URL or record

Illustrative ingredients; an image does not establish local origin.

5.2 LOCAL AND SEASONAL CHOICES

“Local” should be supported by evidence, not used as a vague label. It may refer to a grower, producer or business within a defined region. Seasonal produce can be plentiful and suitable for local conditions, but availability and price still need checking.

Research the producer, ingredient origin, distance, season and the evidence used to make each claim.

5.3 ETHICAL AND ENVIRONMENTAL FACTORS

Food choices can affect soil, water, biodiversity, animal welfare, energy use, packaging, transport and waste. No ingredient is automatically perfect. A responsible comparison considers reliable evidence and the full production system.

Practical actions include planning quantities, using suitable portions, choosing reusable equipment, separating waste as directed and using garden produce effectively.

PAUSE AND APPLY

What evidence would support one ingredient-origin claim?

Check the ideas

Circle the best answer. Return to the reading if an option sounds plausible but is incomplete.

01 Which industry commonly supplies lettuce and herbs?

- ☐ A. Horticulture
- ☐ B. Mining
- ☐ C. Textile manufacturing

02 What makes a “local” claim stronger?

- ☐ A. A green label
- ☐ B. A defined region and evidence about the producer or origin
- ☐ C. A guess based on price

03 Which occurs after primary production?

- ☐ A. Processing and transport
- ☐ B. Sunlight reaching a crop
- ☐ C. Roots taking up water

04 Which is an environmental consideration?

- ☐ A. Packaging and food waste
- ☐ B. The page number
- ☐ C. The font used in a recipe

05 Why avoid claiming one ingredient is automatically sustainable?

- ☐ A. Sustainability depends on evidence and the production system
- ☐ B. All ingredients are identical
- ☐ C. Evidence never matters

06 Two ingredients have different packaging, transport and waste impacts. What should happen next?

- ☐ A. compare the relevant impacts rather than choose from one feature alone
- ☐ B. declare an ingredient perfect without investigating its production system
- ☐ C. ignore the issue and remove it from the record

EXPLAIN ONE DECISION

Choose one answer above. What evidence from the reading, image or your own planning supports it?

Busy Work, then transfer

Use the two paper activities to rehearse the course vocabulary. Show your thinking, not only a final word.

PRACTICE 1 / INGREDIENT JOURNEY CLUE CHALLENGE

Use each word once: EVIDENCE, LOCAL, PROCESS, PRODUCER, RETAIL, SEASONAL.

A3 A set of actions that changes or prepares a food.

A4 A person or business that grows or makes food.

A5 The stage where products are sold to customers.

D1 Available at a particular time of year.

D2 Information used to support a claim.

D6 A word that needs a defined distance or region before it is a useful claim.

PRACTICE 2 / CLAIM DETECTIVE

Mark S supported or V vague, and state missing evidence for V: 1 school-garden herb with harvest record; 2 most sustainable ingredient; 3 producer site names NSW region; 4 local food always greener; 5 package names origin; 6 looks fresh so must be shortest-travelled.

REASONS / EVIDENCE NOTES

6	

TRANSFER

Where could this vocabulary or decision matter in your own burger design?

Ingredient journey investigation

Choose two plant ingredients and two animal or animal-alternative ingredients. Use reliable sources and record the URL—do not invent figures.

Ingredient / type	NSW location + production journey	Evidence URL / source
Plant ingredient 1		
Plant ingredient 2		
Animal / alternative 1		
Animal / alternative 2		

DEFINE LOCAL AND CHECK THE CLAIM

Develop your design

Generate alternatives, test them against criteria and justify a direction.

6.1 DIVERGENT THINKING

Do not stop at the first idea. Generate several distinct burger concepts by changing the main filling, bun, herbs, vegetables, sauce, form or flavour profile. Four genuinely different options create a stronger comparison than four drawings of almost the same product.

Illustrative design options; show your own four distinct ideas.

6.2 ANNOTATING CONCEPTS

An annotation explains a design decision. Label ingredients, layer order, sensory effect, source, function, safety issue or expected user benefit. "Parsley yoghurt sauce adds freshness and uses a garden herb" communicates more than an arrow labelled "sauce".

6.3 CHOOSING WITH EVIDENCE

Use your criteria to compare options. A decision matrix can make trade-offs visible, but scores need reasons. The highest total does not remove your responsibility to explain why the chosen design best fits the brief and constraints. Appropriate response example: "I selected Concept C because its flat patty and matching bun improve stability, while garden parsley supports the brief. I will reduce the sauce quantity to control sogginess."

PAUSE AND APPLY

Name one feature you could vary between two concepts.

Check the ideas

Circle the best answer. Return to the reading if an option sounds plausible but is incomplete.

01 Why generate several concepts?

- ☐ A. To explore genuinely different ways to meet the brief
- ☐ B. To avoid making a decision
- ☐ C. To repeat the same idea four times

02 Which annotation is most useful?

- ☐ A. Nice
- ☐ B. Sauce
- ☐ C. Parsley yoghurt sauce adds freshness and uses a garden herb

03 What should support a decision-matrix score?

- ☐ A. A reason linked to criteria
- ☐ B. A random number
- ☐ C. The order concepts were drawn

04 What makes four options genuinely different?

- ☐ A. Different title colours only
- ☐ B. Meaningful changes to ingredients, form or flavour
- ☐ C. Drawing the same burger four times

05 A strong final justification should mention:

- ☐ A. Only personal preference
- ☐ B. Criteria, constraints and any planned refinement
- ☐ C. Only the highest score

06 Concept C scores highest but has a serious stability weakness. What should happen next?

- ☐ A. acknowledge the weakness and refine it before production
- ☐ B. select the highest total without checking the reasons behind it
- ☐ C. ignore the issue and remove it from the record

EXPLAIN ONE DECISION

Choose one answer above. What evidence from the reading, image or your own planning supports it?

Busy Work, then transfer

Use the two paper activities to rehearse the course vocabulary. Show your thinking, not only a final word.

PRACTICE 1 / CONCEPT VARIATION FIND-A-WORD

S G P J U S S R H P Z
 F L E L B A T E G E V
 K L R H U C R U N V U
 U H A C A B U T I T H
 Q V B V C S C L L X C
 X D N U O A T L L Q J
 T U C D N U U H I Y O
 L Q N U C C R E F W O
 S C B Z E E E Y F U B
 I I A B P F H P W T K
 B F E J T T N A Y M L

Find these words: VEGETABLE, STRUCTURE, FILLING, FLAVOUR, CONCEPT, SAUCE, HERB, BUN.

Name three features to vary.

YOUR RESPONSE

PRACTICE 2 / CONCEPT QUICK-TEST

Mark S strengthens, W weakens or E needs evidence: 1 check four criteria; 2 choose only a favourite; 3 claim local without source/region; 4 compare stability, sensory quality and limits; 5 four concepts change only sauce colour. What source improves 3?

REASONS / EVIDENCE NOTES

RESPONSES

- 1 _____
- 2 _____
- 3 _____
- 4 _____
- 5 _____

TRANSFER

Where could this vocabulary or decision matter in your own burger design?

Four-concept design studio

Draft two genuinely different options here. Develop all four concepts A-D in the final folio on pages 45-46 before selecting one.

CONCEPT A

Label filling, herb, flavour and one user benefit.

CONCEPT B

Change more than the name or colour.

COMPARE BEFORE SELECTING

Garden to kitchen

Connect plant needs, herb production and responsible resource use.

7.1 WHAT PLANTS NEED

Healthy plants require light, water, air, suitable temperature, nutrients and a growing medium that supports roots. Too little water can cause wilting; too much can reduce oxygen around roots. Light and temperature affect growth, while nutrients support plant processes.

Illustrative garden; confirm the actual herbs and harvest process.

7.2 GROWING AND HARVESTING HERBS

Herbs such as parsley, basil or chives can add flavour, aroma and colour. Identify plants correctly, harvest only with permission, select healthy material, wash produce as instructed and use clean tools. Harvesting methods should allow the plant to continue growing where possible.

7.3 SUSTAINABILITY IN PRACTICE

Sustainable practice aims to meet present needs while protecting future environmental, social and economic wellbeing. In a school garden and kitchen, this includes efficient watering, caring for soil, planning harvests, avoiding unnecessary food waste and valuing the work required to grow ingredients.

A claim should connect an action to an effect—for example, measuring ingredients carefully can reduce avoidable waste.

PAUSE AND APPLY

Name one herb need and how you would check it.

Check the ideas

Circle the best answer. Return to the reading if an option sounds plausible but is incomplete.

01 Why can overwatering harm roots?

- ☐ A. It can reduce available oxygen around them
- ☐ B. It creates extra sunlight
- ☐ C. It always adds nutrients

02 Which is a safe harvesting action?

- ☐ A. Taste unknown plants
- ☐ B. Harvest any plant without permission
- ☐ C. Identify the herb and use clean tools as instructed

03 What can fresh herbs add to a burger?

- ☐ A. Flavour, aroma and colour
- ☐ B. A guaranteed submission mark
- ☐ C. A replacement for safe food handling

04 Which action can reduce avoidable food waste?

- ☐ A. Measure planned quantities
- ☐ B. Collect ingredients without a recipe
- ☐ C. Discard usable ingredients immediately

05 A strong sustainability explanation links:

- ☐ A. An action to its likely effect
- ☐ B. A colour to a personal guess
- ☐ C. A slogan to no evidence

06 A group measures only the herbs needed for its recipe. What should happen next?

- ☐ A. explain that planned quantity reduces unnecessary harvest and waste
- ☐ B. harvest more produce than the recipe can use
- ☐ C. ignore the issue and remove it from the record

EXPLAIN ONE DECISION

Choose one answer above. What evidence from the reading, image or your own planning supports it?

Busy Work, then transfer

Use the two paper activities to rehearse the course vocabulary. Show your thinking, not only a final word.

PRACTICE 1 / PLANT-NEEDS CLUE CHALLENGE

Use each word once: AIR, HARVEST, LIGHT, NUTRIENTS, ROOTS, SOIL, SPACE, WATER.

A4 Substances plants need for healthy growth.

A6 Energy source needed for plant growth.

A7 Plant structures that take up water and help anchor the plant.

D1 Collecting usable plant material at an appropriate time.

D2 Needed around leaves and roots.

D3 Needed in suitable amounts; too much or too little can cause problems.

D5 Growing medium that can hold water, air and nutrients.

D8 Room that reduces competition between plants.

PRACTICE 2 / GARDEN PROBLEM SOLVER

Match A-F to 1-6; ask the teacher before changing the garden. A plants crowded; B leaves wilting; C leaning growth; D wet soil; E unexpected damage; F herbs harvested too fast. 1 drainage/watering; 2 spacing; 3 light; 4 harvest amount; 5 water availability; 6 observe and seek guidance.

REASONS / EVIDENCE NOTES

RESPONSES

A

E

F

TRANSFER

Where could this vocabulary or decision matter in your own burger design?

Herb and garden investigation

This activity adapts the teacher-posted herb worksheet and plant-needs reading.

Local producer + NSW location	Meat or plant product	Evidence URL / source
Producer 1		
Producer 2		
Producer 3		

HERB IDENTITY, USE AND HARVEST

Name the herb, edible part, flavour, possible uses, harvest timing and evidence.

GARDEN LAYOUT PLAN

Sketch plant locations. Label spacing, light, water, soil, air and nutrient needs; show the watering method. Actual bed dimensions: Teacher to confirm.

Plan production

Turn the selected concept into an accurate, manageable production plan.

8.1 A PRODUCTION-READY RECIPE

A recipe must communicate exact ingredients, quantities and an ordered method. Use consistent units, name preparation requirements such as “finely chopped”, and include the yield. Sequence steps so preparation, cooking and assembly can happen safely within the available time.

Illustrative plan; pictured writing is not a class recipe.

8.2 FOOD ORDER AND RESOURCES

A food order totals the ingredients required for the planned yield. Check what the school supplies and what must be ordered or brought, according to teacher directions. Avoid duplicates, use realistic quantities and identify any ingredient with an allergen or storage requirement.

8.3 WORKPLAN

A workplan maps time, activity, equipment and ingredients. Begin with hygiene and setup, identify tasks that can overlap safely, allow time for cooking and checking, and protect enough time for assembly, photography, cleaning and evaluation.

Dates, lesson length, supplied ingredients and submission arrangements are Teacher to confirm.

PAUSE AND APPLY

Which recipe detail must be confirmed before ordering?

Check the ideas

Circle the best answer. Return to the reading if an option sounds plausible but is incomplete.

01 What belongs in a production-ready recipe?

- ☐ A. Exact quantities and an ordered method
- ☐ B. Only a product name
- ☐ C. Unmeasured ingredients

02 Why include the recipe yield?

- ☐ A. To match ingredient quantities to the intended number of serves
- ☐ B. To replace food safety
- ☐ C. To choose a font

03 What should a food order avoid?

- ☐ A. Ingredient names
- ☐ B. Realistic quantities
- ☐ C. Unnecessary duplicates

04 What should the workplan protect time for?

- ☐ A. Only assembly
- ☐ B. Setup, production, recording and cleaning
- ☐ C. Waiting without a task

05 Who confirms current lesson timing and supplied ingredients?

- ☐ A. A previous year's document
- ☐ B. The teacher
- ☐ C. This website automatically

06 The plan reaches lesson end immediately after assembly. What should happen next?

- ☐ A. revise earlier stages to reserve time for recording and cleaning
- ☐ B. plan only the cooking and assembly steps
- ☐ C. ignore the issue and remove it from the record

EXPLAIN ONE DECISION

Choose one answer above. What evidence from the reading, image or your own planning supports it?

Busy Work, then transfer

Use the two paper activities to rehearse the course vocabulary. Show your thinking, not only a final word.

PRACTICE 1 / RECIPE LANGUAGE FIND-A-WORD

I D T I A K S L S P R
X N Y I E L D I L B Z
K W G E L Q F K I L X
J W O R K P L A N M R

J L C E R A P E R P R
K Y U M G C C G N U T
S T M M D C T S C T P
K I G K S X M B L O Q

Find these words: INGREDIENT, QUANTITY, SEQUENCE, WORKPLAN, PREPARE, MEASURE, METHOD, YIELD.

Which term states the number of serves?

YOUR RESPONSE

PRACTICE 2 / PRODUCTION TIMELINE PUZZLE

Number a safe production sequence 1-8: A assemble/present; B read recipe, workplan and directions; C clean/pack up; D hygiene and workstation; E record quality and changes; F measure ingredients/tools; G prepare safely; H cook under supervision. Exact timing: Teacher to confirm.

REASONS / EVIDENCE NOTES

RESPONSES

A _____

H _____

TRANSFER

Where could this vocabulary or decision matter in your own burger design?

Production planner

Prepare the three connected records used in the class sequence: recipe, food order and workplan.

Recipe / food-order record	Student decision or source	Teacher check
Yield and serves		
Exact ingredients		
Numbered method		
Order quantities		

Timed workplan	Time / role / equipment	Safety or quality check
Hygiene and set-up		
Preparation		
Cook / assemble		
Present and clean down		

Complete the full approved recipe and order on p48, then the production record on p49.

Produce and present

Manage safety, timing and quality while making the final product.

9.1 FOLLOW, MONITOR, ADAPT

Use the workplan as a guide, not as an excuse to ignore evidence. Monitor appearance, texture, temperature controls and time. If a safe change is needed, pause, consult the teacher when required, record what changed and explain why.

Illustrative finished product; record your own production evidence.

9.2 QUALITY CONTROL

Quality control checks the product during production rather than waiting until the end. Examples include checking ingredient measurements, patty size, even preparation, browning, bun condition, layer order and workstation hygiene. Follow teacher instructions for checking that food is safely cooked.

9.3 PRESENTATION AND EVIDENCE

Presentation should support the intended user and make the burger's structure visible. Use a clean plate or board, remove distracting spills and avoid inedible decoration. Photograph the finished product in good light from an angle that shows its layers and scale.

Record the final burger promptly. A photograph supports evidence but does not replace written evaluation.

PAUSE AND APPLY

Name one quality checkpoint and the evidence to keep.

Check the ideas

Circle the best answer. Return to the reading if an option sounds plausible but is incomplete.

01 What should you do when a safe change to the plan is needed?

- ☐ A. Hide it
- ☐ B. Record what changed and explain why
- ☐ C. Ignore the problem

02 When does quality control occur?

- ☐ A. Only after submission
- ☐ B. During production at planned checkpoints
- ☐ C. Before reading the recipe

03 Which is a useful quality check?

- ☐ A. Patty size and even preparation
- ☐ B. Whether the patty is green
- ☐ C. How fast another group works

04 What makes strong photographic evidence?

- ☐ A. A cluttered bench in poor light
- ☐ B. A clear view showing the product and layers
- ☐ C. A photo of an unrelated burger

05 Does a photograph replace written evaluation?

- ☐ A. Yes, always
- ☐ B. Only if it has a filter
- ☐ C. No; it supports but does not replace evaluation

06 The final photograph hides the burger layers behind decoration. What should happen next?

- ☐ A. remove distractions and reframe the real product clearly
- ☐ B. use an unrelated or heavily misleading image
- ☐ C. ignore the issue and remove it from the record

EXPLAIN ONE DECISION

Choose one answer above. What evidence from the reading, image or your own planning supports it?

Busy Work, then transfer

Use the two paper activities to rehearse the course vocabulary. Show your thinking, not only a final word.

PRACTICE 1 / QUALITY-CONTROL CLUE CHALLENGE

Use each word once: CHECK, EVIDENCE, HYGIENE, MONITOR, RECORD, TEXTURE.

A3 Information used to support a judgement.

A4 A sensory quality felt in the mouth or by touch.

A5 Capture what happened so it can be reviewed later.

D1 Practices that support safe food preparation.

D2 Observe progress during production.

D6 Compare what is happening with the plan or criterion.

PRACTICE 2 / EVIDENCE-TO-CLAIM MATCH

Match A-F evidence to claims 1-6: A labelled setup photo; B workplan with changes; C final photo; D feedback note; E quality-check record; F cleaning checklist. 1 final assembly; 2 reasons for change; 3 mise en place; 4 pack-up; 5 external response; 6 monitored production.

TRANSFER

Where could this vocabulary or decision matter in your own burger design?

Production evidence log

Theory help: presentation and evidence

Quality checkpoint	What happened	Safe adjustment / evidence
Ingredient readiness		
Cooking progress		
Assembly and stability		
Presentation / serving		

FINAL PHOTO FILENAME AND CAPTION

Use only a teacher-authorised image of your own work. State what the image proves; no faces or names.

BEFORE: SET-UP EVIDENCE

CHANGE TO PLAN AND REASON

Evaluate and reflect

Judge the solution with evidence and use the result to improve.

10.1 EVALUATE AGAINST CRITERIA

Evaluation is a reasoned judgement, not a description of what you did. Return to each success criterion, state the result, cite evidence and explain the judgement. Evidence may include observations, measurements, photographs, user feedback and comparison with the design plan.

Illustrative evaluation; judge your own result against criteria.

10.2 CONSIDER THE WHOLE SOLUTION

Evaluate function, appearance, sensory properties, ergonomics, cost, resource use, safety, cultural suitability, ethical factors, sustainability and technical quality where relevant. Not every factor will be equally important, so explain priorities.

Feedback is useful evidence, but one person's preference should not automatically outweigh the brief or safety requirements.

10.3 REFLECT AND IMPROVE

A useful improvement is specific and achievable: name what would change, how it would change and the expected effect. "Reduce the sauce from two tablespoons to one so the base stays firm" is stronger than "make it better". Finish by reflecting on your planning, practical skills, independence and response to problems. Honest reflection shows learning.

PAUSE AND APPLY

Give one criterion and a result that would support your judgement.

Check the ideas

Circle the best answer. Return to the reading if an option sounds plausible but is incomplete.

01 What makes an evaluation a judgement?

- ☐ A. It uses evidence to decide how well criteria were met
- ☐ B. It lists the method again
- ☐ C. It says "good" without a reason

02 Which can be evaluation evidence?

- ☐ A. Measurements, observations and user feedback
- ☐ B. An unrelated advertisement
- ☐ C. A guess made before production

03 Why might criteria have different importance?

- ☐ A. The brief and user needs create priorities
- ☐ B. Safety never matters
- ☐ C. All design factors are identical

04 Which improvement is most specific?

- ☐ A. Make it better
- ☐ B. Use less sauce so the base stays firm
- ☐ C. Try harder

05 What should final reflection include?

- ☐ A. Planning, skills, independence and problem-solving
- ☐ B. Only the product name
- ☐ C. Only another student's result

06 The base became soggy because the sauce quantity was high. What should happen next?

- ☐ A. reduce and reposition the sauce, then predict a firmer base
- ☐ B. write only "make it better next time"
- ☐ C. ignore the issue and remove it from the record

EXPLAIN ONE DECISION

Choose one answer above. What evidence from the reading, image or your own planning supports it?

Busy Work, then transfer

Use the two paper activities to rehearse the course vocabulary. Show your thinking, not only a final word.

PRACTICE 1 / EVALUATION VOCABULARY FIND-A-WORD

D Y R O S N E S Y C P
R T C E L F E R R A S
U T K C M E F I H Q A
C G K N O I T C N U F
Y T N E M E G D U J E

TRANSFER

Where could this vocabulary or decision matter in your own burger design?

THE RIV BURGER / STAGE 4

41 / 50

Evaluation builder

Build each judgement from a criterion, evidence and a specific improvement.

Criterion	Evidence	Judgement + improvement
Function and ergonomics		
Sensory and appearance		
Safety and production		
Ethical / environmental choice		

REFLECT ON YOUR PROCESS

Describe planning, practical skills, independence and problem-solving. Name one next improvement and why it matters.

Brief and success criteria

Define the need, young user, constraints and testable criteria.

MY DESIGN BRIEF

Explain the product, user and purpose in your own words.

Criterion	Why it matters	How I will test it

CONFIRMED CONSTRAINTS / TEACHER TO CONFIRM

Safety and source evidence

Record key food-room controls, readiness, layer function and supported ingredient origin.

Ingredient / type	NSW source + journey (p22)	Evidence URL
Plant 1		
Plant 2		
Animal / alternative 1		
Animal / alternative 2		

Safety or allergen uncertainty	Control / teacher check
Ingredient or label	
Raw / ready-to-eat contact	
Equipment or cooking step	

Do not label an ingredient local, sustainable or allergen-safe without current evidence. Attach the three-producer and garden investigation from p30.

Design concepts A and B

Draw and annotate two genuinely different burger concepts.

CONCEPT A

Sketch and annotate filling, bun, herbs, structure and user benefit.

CONCEPT B

Make this a genuinely different option.

ONE TRADE-OFF BETWEEN THESE IDEAS

Design concepts C and D

Draw and annotate two more distinct options to complete the four-concept set.

CONCEPT C

Sketch and annotate filling, bun, herbs, structure and user benefit.

CONCEPT D

Make this a genuinely different option.

ONE TRADE-OFF BETWEEN THESE IDEAS

Select, refine and use herbs

Compare the four options, justify one, refine it and explain its herb/garden connection.

Criterion	A	B	C	D
User fit				
Flavour / sensory				
Stability				
Local source				
Garden herb / harvest				
Practical feasibility				

CHOSEN CONCEPT AND REASON

Justify the selection and herb role. Use p30 for three producer sources, garden spacing, watering and harvest evidence.

Recipe and food order

Record a student-designed recipe with exact quantities and a checked supply list.

Ingredient / category	Quantity and unit	Source / order check
Fruit / vegetables		
Main filling		
Bun		
Condiments		
Herbs / spices		
Other		
Total / yield		

NUMBERED METHOD / KEY STEPS

Use the current teacher recipe and food-order masters. Attach the full approved method if it needs more space. Confirm quantities, yield, cost and dietary controls before ordering or cooking.

Workplan and production record

Plan safe supervised production, then record checks, changes and honest evidence.

Quality checkpoint / time	Observed result	Adjustment / evidence
1 Ingredients / set-up		
2 Cooking progress		
3 Assembly / stability		
4 Presentation / serving		

CHANGE TO THE WORKPLAN AND REASON

FINAL PHOTO FILENAME AND CAPTION

Use teacher-authorised evidence of your own product; no faces or names. State what the photo shows.

Evaluate and reflect

Judge the result against criteria using evidence and name precise improvements.

Success criterion	Result and evidence	Judgement + improvement
Function / ergonomics		
Appearance		
Sensory quality		
User fit		
Safety / practical work		
Responsible choice		

REFLECT ON HOW YOU WORKED

Consider planning, skills, independence and problem-solving. Name a specific next improvement and its expected effect.
