

Source-bound teaching notes

This guide supports the 50-page student edition. It contains the selected knowledge-check answers and look-for notes for the paper activities. The student book deliberately contains no answer key.

CURRENT AUTHORITY

Use the teacher-issued design task, food-order form and final recipe master. The website and previous compact workbook support theory and paper adaptation; they do not replace current teacher directions or assessment conditions.

TEACHER TO CONFIRM BEFORE PRACTICAL WORK

- Confirm timetable, lesson order, class supports and approved adjustments.
- Confirm each practical activity, materials, equipment, supervision and current risk controls.
- Confirm assessment authority, marks, dates, conditions and submission method.
- Confirm current links, program version and local sequence changes.

COURSE SOURCE AND PRINT SETUP

<https://stevenccowell.github.io/Year-8-The-Riv-Burger/>

Use the current teacher-posted design task, food-order form and final recipe master for live class details. Print the student PDF A4 at actual size, double-sided with long-edge flip; check one proof sheet before a class set. Keep this guide teacher-only.

FEEDBACK ROUTINE

Read the student's evidence first. Check whether it answers the current brief, uses observable criteria, explains safe decisions and distinguishes their own observations from sources. Return an unclear local fact to the teacher rather than filling it with a guess.

Module 01: The challenge

SELECTED KNOWLEDGE CHECKS

1. B / To turn a need or opportunity into a clear design task

Why: A brief turns the local business need into a design task that can guide later choices about the burger and its users.

2. C / The burger can be held and eaten without the fillings falling out

Why: Whether fillings stay in place while the burger is held and eaten can be observed and tested, unlike a vague opinion.

3. A / The available lesson time

Why: Available lesson time is a real limit on what preparation, production and clean-up can be completed.

4. B / It can reduce comfort and stability for the user

Why: Extra height can make layers shift and the burger harder for the intended user to grip and bite.

5. B / The customer and the person producing the burger

Why: The customer must be able to enjoy and handle the burger, while the cook must make it safely with available resources.

6. A / rewrite it as a specific observable quality

Why: The word nice gives no way to judge success, so it needs to become a specific quality that can be observed.

BUSY WORK LOOK-FOR NOTES

1. Design language find-a-word

Answer / look-for: CONSTRAINT, CRITERIA, FUNCTION, EVIDENCE, DESIGN, BRIEF, USER, NEED.

Open response: Explain a meaningful connection between two design terms.

2. Brief sorter

Answer / look-for: 1=U; 2=CO; 3=CR; 4=N; 5=CR; 6=CO.

Open response: Name a testable criterion and explain how it could be checked.

EVIDENCE TO NOTICE

A student-worded brief, three testable criteria and real constraints, not a guessed assessment notice.

Module 02: Safe food practices

SELECTED KNOWLEDGE CHECKS

1. A / After touching raw food or waste

Why: Raw food or waste can contaminate hands again, creating a pathway to ready-to-eat ingredients unless hands are washed.

2. B / The transfer of harmful microorganisms or allergens

Why: Cross-contamination describes microorganisms or allergens moving between foods, people, tools or surfaces.

3. B / Use a stable board and the instructed technique

Why: A stable board reduces slipping while the demonstrated technique keeps cutting controlled.

4. C / Stop and ask the teacher

Why: An unclear allergen requirement needs the teacher's current instructions before any food is prepared or served.

5. B / Follow instructions, minimise dust and wash hands

Why: Minimising potting-mix dust and washing hands addresses exposure and transfer risks during garden work.

6. A / stop and stabilise the board before continuing with the instructed technique

Why: Stopping and stabilising the board removes the immediate slipping hazard before cutting resumes.

BUSY WORK LOOK-FOR NOTES

1. Food-safety clue challenge

Answer / look-for: Across 1 CLEAN, 5 ALLERGEN; Down 1 CONTROL, 2 SEPARATE, 3 HYGIENE, 4 HAZARD.

Open response: Identify an answer that helps prevent cross-contamination and justify it.

2. Hazard-control match

Answer / look-for: A-3, B-5, C-6, D-4, E-1, F-2.

Open response: Name the point where the student must stop and seek teacher direction.

EVIDENCE TO NOTICE

Specific hazard paths and controls, with uncertain allergens and practical directions returned to the teacher.

Module 03: Tools and workflow

SELECTED KNOWLEDGE CHECKS

1. A / It organises ingredients, equipment and tasks before cooking

Why: Mise en place puts the method, ingredients, equipment and work area in order before production begins.

2. B / Digital scale

Why: A digital scale directly measures ingredient mass, whereas a spoon measures volume and a spatula moves food.

3. A / To spot the sequence, equipment and timing needs

Why: Reading the whole method reveals the task order, required equipment and timing dependencies before work starts.

4. B / In the safe location directed by the teacher

Why: The teacher's safe knife location keeps the blade controlled and prevents hidden contact during washing-up.

5. C / Clean as you go and keep movement paths clear

Why: Cleaning as work proceeds prevents clutter and spills from obstructing safe movement between tasks.

6. A / make the area safe and clean the spill promptly

Why: A spill beside a movement path creates a slip risk, so the area must be made safe and cleaned promptly.

BUSY WORK LOOK-FOR NOTES

1. Mise en place shuffle

Answer / look-for: 1=4; 2=1; 3=7; 4=2; 5=3; 6=6; 7=5; 8=8.

Open response: Explain why an orderly setup reduces rushing or a named hazard.

2. Tool-to-job match

Answer / look-for: A-4, B-1, C-5, D-2, E-3, F-6.

Open response: Justify one tool choice by function and safe-use point.

EVIDENCE TO NOTICE

Six before-cooking actions, four during-cooking controls, six pack-up actions and a clear stop-and-ask point.

Module 04: Burger anatomy

SELECTED KNOWLEDGE CHECKS

1. B / To contain the product and provide structure

Why: The bun holds the interacting layers together and provides the structure needed to handle the burger.

2. A / Aroma

Why: Aroma is detected by smell, making it a sensory property rather than an administrative detail.

3. A / To reduce excess moisture and sogginess

Why: Excess surface water can soak the bun and weaken the texture and stability of the assembled burger.

4. B / The crisp lettuce contrasted with the soft bun

Why: Describing crisp lettuce against a soft bun identifies a specific observable texture contrast.

5. A / Match bun and filling sizes

Why: Similar bun and filling sizes give the layers better support and make the burger easier to hold together.

6. A / adjust component size, surface contact or layer order

Why: A sliding filling points to a size, contact or layer-order problem that can be changed deliberately.

BUSY WORK LOOK-FOR NOTES

1. Burger layer find-a-word

Answer / look-for: STABILITY, FILLING, TEXTURE, FLAVOUR, SAUCE, FRESH, AROMA, BUN.

Open response: Link a layer term to a functional or sensory consequence.

2. Stack stability trouble-shooter

Answer / look-for: 1: review layer order, moisture and grip; 2: wet ingredients, sauce amount and timing; 3: add purposeful texture contrast; 4: reduce or reorganise layers.

Open response: Explain a specific change to improve stability or ergonomics.

EVIDENCE TO NOTICE

Layer functions plus taste, nutrition, appearance, current price and likely stability problems.

Module 05: Ingredients and agriculture

SELECTED KNOWLEDGE CHECKS

1. A / Horticulture

Why: Horticulture is the agricultural practice associated with growing vegetables and herbs.

2. B / A defined region and evidence about the producer or origin

Why: A stated region and producer or origin evidence make the meaning of local checkable rather than assumed.

3. A / Processing and transport

Why: Processing and transport are later stages that connect primary production with the food people buy and prepare.

4. A / Packaging and food waste

Why: Packaging and food waste use resources and create impacts beyond the ingredient's flavour or appearance.

5. A / Sustainability depends on evidence and the production system

Why: Sustainability depends on evidence across growing, processing, transport, packaging and waste, not on an ingredient label alone.

6. A / compare the relevant impacts rather than choose from one feature alone

Why: Comparing several relevant impacts avoids declaring a better choice from packaging or transport alone.

BUSY WORK LOOK-FOR NOTES

1. Ingredient journey clue challenge

Answer / look-for: Across 3 PROCESS, 4 PRODUCER, 5 RETAIL; Down 1 SEASONAL, 2 EVIDENCE, 6 LOCAL.

Open response: Identify evidence needed to verify a local-food claim.

2. Claim detective

Answer / look-for: 1=S; 2=V; 3=S; 4=V; 5=S; 6=V.

Open response: Rewrite a vague claim with a checkable source or observation.

EVIDENCE TO NOTICE

Two plant and two animal/alternative journeys with NSW location, production pathway, source URL and a defined local claim.

Module 06: Develop your design

SELECTED KNOWLEDGE CHECKS

1. A / To explore genuinely different ways to meet the brief

Why: Several distinct concepts reveal different ways to meet the same brief and make comparison possible.

2. C / Parsley yoghurt sauce adds freshness and uses a garden herb

Why: The annotation explains both the sauce's sensory purpose and how it responds to the garden-herb brief.

3. A / A reason linked to criteria

Why: A decision-matrix score is useful only when its reason can be traced to a stated criterion.

4. B / Meaningful changes to ingredients, form or flavour

Why: Changing ingredients, form or flavour changes the proposed product, whereas a new title or colour does not.

5. B / Criteria, constraints and any planned refinement

Why: Criteria and constraints explain the selection, while a planned refinement addresses a weakness before production.

6. A / acknowledge the weakness and refine it before production

Why: A high total score does not erase a serious stability weakness, so the concept needs an explained refinement.

BUSY WORK LOOK-FOR NOTES

1. Concept variation find-a-word

Answer / look-for: VEGETABLE, STRUCTURE, FILLING, FLAVOUR, CONCEPT, SAUCE, HERB, BUN.

Open response: Show how two ingredients or structural choices create a distinct concept.

2. Concept quick-test

Answer / look-for: 1=S; 2=W; 3=E; 4=S; 5=W.

Open response: Justify a concept test against the brief or constraints.

EVIDENCE TO NOTICE

Two distinct draft options here; four fully annotated concepts on folio pages 45-46 before selection.

Module 07: Garden to kitchen

SELECTED KNOWLEDGE CHECKS

1. A / It can reduce available oxygen around them

Why: Too much water can fill air spaces in the growing medium and leave less oxygen available to roots.

2. C / Identify the herb and use clean tools as instructed

Why: Correct identification and clean instructed harvesting reduce the risk of using the wrong plant or contaminating food.

3. A / Flavour, aroma and colour

Why: Herbs can change the burger's taste, smell and visual colour without changing its main structure.

4. A / Measure planned quantities

Why: Measuring the amount needed helps avoid unnecessary harvest, leftovers and food waste.

5. A / An action to its likely effect

Why: A sustainability explanation becomes meaningful when it shows how a chosen action affects resources or waste.

6. A / explain that planned quantity reduces unnecessary harvest and waste

Why: Matching the harvest to the planned recipe leaves more usable plant growth and reduces avoidable waste.

BUSY WORK LOOK-FOR NOTES

1. Plant-needs clue challenge

Answer / look-for: Across 4 NUTRIENTS, 6 LIGHT, 7 ROOTS; Down 1 HARVEST, 2 AIR, 3 WATER, 5 SOIL, 8 SPACE.

Open response: Identify how crowding affects air and space or another plant need.

2. Garden problem solver

Answer / look-for: A-2, B-5, C-3, D-1, E-6, F-4.

Open response: Explain why observation precedes an approved garden change.

EVIDENCE TO NOTICE

Herb identity/use/harvest, three evidenced local producers, and a garden layout with spacing and watering.

Module 08: Plan production

SELECTED KNOWLEDGE CHECKS

1. A / Exact quantities and an ordered method

Why: Exact quantities and a safe ordered method let another cook understand the plan without guessing.

2. A / To match ingredient quantities to the intended number of serves

Why: Yield tells the cook how many serves the quantities are intended to produce and supports accurate scaling.

3. C / Unnecessary duplicates

Why: Combining repeated requirements into one checked total prevents an inflated or wasteful food order.

4. B / Setup, production, recording and cleaning

Why: A workable plan covers setup, making, recording evidence and cleaning, rather than only the cooking steps.

5. B / The teacher

Why: Only the teacher can confirm the current class timetable and which ingredients the school will supply.

6. A / revise earlier stages to reserve time for recording and cleaning

Why: Reserving time before lesson end protects the required evidence and teacher-approved clean-up routine.

BUSY WORK LOOK-FOR NOTES

1. Recipe language find-a-word

Answer / look-for: INGREDIENT, QUANTITY, SEQUENCE, WORKPLAN, PREPARE, MEASURE, METHOD, YIELD.

Open response: Use a recipe term in a precise production instruction.

2. Production timeline puzzle

Answer / look-for: 1=7; 2=1; 3=8; 4=2; 5=6; 6=3; 7=4; 8=5.

Open response: Explain where a safety or quality check belongs in the sequence.

EVIDENCE TO NOTICE

Yield, exact ingredients, numbered method, food order and timed workplan checked against the current masters.

Module 09: Produce and present

SELECTED KNOWLEDGE CHECKS

1. B / Record what changed and explain why

Why: Recording a justified safe change keeps the production evidence honest and explains how the plan was adapted.

2. B / During production at planned checkpoints

Why: Checks during production can reveal a problem early enough to correct it before the product is finished.

3. A / Patty size and even preparation

Why: Checking size and even preparation tests whether components match the planned form and can be produced consistently.

4. B / A clear view showing the product and layers

Why: A clear image of the actual burger and its layers lets a reader inspect structure and compare it with the design.

5. C / No; it supports but does not replace evaluation

Why: A photograph can show appearance, but the student still has to explain what the evidence means against the criteria.

6. A / remove distractions and reframe the real product clearly

Why: Removing distractions and reframing the real burger makes its layers visible without misleading the viewer.

BUSY WORK LOOK-FOR NOTES

1. Quality-control clue challenge

Answer / look-for: Across 3 EVIDENCE, 4 TEXTURE, 5 RECORD; Down 1 HYGIENE, 2 MONITOR, 6 CHECK.

Open response: Connect monitoring, checking and recording to quality control.

2. Evidence-to-claim match

Answer / look-for: A-3, B-2, C-1, D-5, E-6, F-4.

Open response: Explain how a caption makes photographic evidence more meaningful.

EVIDENCE TO NOTICE

Four observed quality checkpoints, safe changes, set-up evidence, and a photo filename with meaningful caption.

Module 10: Evaluate and reflect

SELECTED KNOWLEDGE CHECKS

1. A / It uses evidence to decide how well criteria were met

Why: An evaluation judges how well a stated criterion was met and supports that judgement with evidence.

2. A / Measurements, observations and user feedback

Why: Measurements, observations and feedback are evidence that can support or challenge claims about the final product.

3. A / The brief and user needs create priorities

Why: The brief and user needs determine priorities, so not every criterion should be treated as equally important.

4. B / Use less sauce so the base stays firm

Why: Using less sauce directly addresses excess moisture and predicts a firmer base, making it a testable improvement.

5. A / Planning, skills, independence and problem-solving

Why: Reflection should examine how planning, practical skills, independence and problem-solving developed, not only describe the burger.

6. A / reduce and reposition the sauce, then predict a firmer base

Why: Reducing and repositioning sauce targets the observed cause of sogginess and predicts an effect that can be checked later.

BUSY WORK LOOK-FOR NOTES

1. Evaluation vocabulary find-a-word

Answer / look-for: CRITERION, JUDGEMENT, EVIDENCE, FUNCTION, IMPROVE, REFLECT, SENSORY, SAFETY.

Open response: Link evidence to a criterion before forming a judgement.

2. Evaluation sentence builder

Answer / look-for: 1=D; 2=E; 3=J; 4=I; 5=E; 6=J.

Open response: Build a criterion-evidence-judgement-improvement sentence.

EVIDENCE TO NOTICE

Evidence-based judgements and improvements, plus reflection on planning, skills, independence and problem-solving.

Final folio: evidence and feedback

The eight student pages gather a defensible design story. Judge each page against the current teacher task, not against an assumed recipe, budget or assessment date.

- 01** Brief and criteria: intended user, local produce and home-grown herbs; testable measures.
- 02** Safety and sourcing: four ingredient journeys and URLs, controls, and teacher checks; attach p30 producer evidence.
- 03** Concepts A/B: two genuinely distinct options with useful labels and trade-offs.
- 04** Concepts C/D: two further options, not cosmetic repeats.
- 05** Selection and herbs: reasons linked to criteria, three producers, garden spacing and watering, and harvest evidence.
- 06** Recipe/order: current quantities, units, yield, numbered method and teacher checks; no guessed settings.
- 07** Workplan/production: timed plan, four quality checkpoints, photo filename/caption and honest changes.
- 08** Evaluation: six criteria with evidence and improvement, plus planning, skills and independence reflection.

Historical marks and dates in earlier source material are not current class directions. Confirm them with the teacher before giving students a due date or mark allocation.
