

DESIGN & TECHNOLOGY

Stage 6 Design and Technology

240-hour master program | v1.0 Network Benchmark

Year 11 blocks 1-60 are complete. Year 12 blocks 61-120 establish a provisional continuity map for the authorised HSC build that follows.

Built 31 August 2026 Y11-DT-2026-08-31-v1			
Courses	11080 Preliminary + 15080 HSC	Delivery	240 indicative hours 120 x 2-hour equivalent blocks
Year 11	Complete 120-hour program	Year 12	Provisional HSC continuity map - detailed program pending
Core projects	At least two Preliminary projects	HSC synthesis	Major Design Project + innovation case study
Authority	Current NESA and school documents	Build	31 August 2026 annual syllabus and assessment check required

Official course page: [Design and Technology Stage 6 Syllabus \(2013\)](#)
Year 12 status: the sequence below is a planning bridge, not a finished HSC teaching program.

Two-year continuity map

Pair	Year 11 foundation	Year 12 application
1	Design and Technology foundations Understand the course, the work of designers and the adaptable processes used to move from a need to an evaluated solution.	HSC orientation and opportunity discovery Reconnect Preliminary habits with HSC innovation study and the MDP; explore needs without locking in a solution.
2	Factors affecting design Analyse how needs, function, aesthetics, ergonomics, finance, quality, safety and environmental consequences interact.	MDP proposal and scope Define a significant need or opportunity, stakeholders, project boundaries, feasibility and proposal evidence.
3	Research that informs design Use varied, ethical and fit-for-purpose research to establish needs, build criteria and modify ideas.	Research, criteria and design direction Use ethical research, evidence synthesis and criteria to guide a defensible design direction.
4	Design and production settings Relate school design projects to domestic, community, industrial and commercial practices and technologies.	Project management and finance Develop active action, time and finance plans with dependencies, contingencies and decision points.
5	Communicating research and design knowledge Choose communication methods for purpose and audience, use command verbs accurately and complete the Research Assignment with evidence.	Creative concept development Generate, communicate and compare genuinely different concepts using creative and innovative approaches.
6	Creativity and collaborative design Generate alternatives, use cognitive organisers deliberately and collaborate through clear roles and evidence.	Experimentation and prototyping Test high-risk functions, materials, ergonomics and processes before committing to full production.
7	Briefs, users and criteria Translate evidence about users and contexts into a clear brief, practical boundaries and criteria that guide testing.	Resources and technological decisions Justify materials, components, services, software and technologies through evidence and whole-project constraints.

Pair	Year 11 foundation	Year 12 application
8	Graphical and design communication Use freehand, pictorial, orthogonal and digital communication to develop and explain ideas.	Production planning and WHS Resolve specifications, sequence, quality assurance, safe work and production evidence.
9	CAD and rapid prototyping Build controlled digital models, transfer information to production and use rapid prototypes to test assumptions.	Project development and realisation I Produce the MDP while documenting practical skill, quality, changes and industrial/commercial links.
10	Testing, materials and evaluation Select resources through evidence, plan fair tests and use evaluation to refine prototypes before final production.	Project development and realisation II Continue production, control scope and quality, and apply evidence from ongoing evaluation.
11	Camping design project Identify a genuine camping need and convert evidence, constraints and project criteria into a feasible compact product direction.	Innovation case study foundations Select and define an innovation; investigate context, development, stakeholders and evidence reliability.
12	Project management and safe production Use action, time, finance, resource and WHS planning as active decision tools during project development and production.	Innovation success and entrepreneurial activity Analyse timing, technologies, agencies, marketing, finance and entrepreneurial decisions affecting success.
13	Manufacturing, quality and production evidence Plan and document a controlled production sequence that links workshop decisions to industrial and commercial practice.	Ethical, social and environmental impacts Evaluate rights, responsibilities, equity, intellectual property, sustainability and impacts on Australian society.
14	Marketing, sustainability and final evaluation Evaluate the completed solution and communicate a credible market position using evidence rather than unsupported claims.	Emerging technologies and examination synthesis Critically assess technological emergence and impact; practise sustained evidence-rich HSC responses.
15	Preliminary synthesis and Year 12 bridge Integrate Preliminary knowledge, practise evidence-rich responses and carry disciplined project habits into the HSC course.	MDP completion and final evaluation Complete, present and evaluate the MDP against need, criteria, process evidence and whole-of-life impacts.

Preliminary outcomes

P1.1	examines design theory and practice, and considers the factors affecting designing and producing in design projects	P4.3	evaluates the processes and outcomes of designing and producing
P2.1	identifies design and production processes in domestic, community, industrial and commercial settings	P5.1	uses a variety of management techniques and tools to develop design projects
P2.2	explains the impact of a range of design and technology activities on the individual, society and the environment through the development of projects	P5.2	communicates ideas and solutions using a range of techniques
P3.1	investigates and experiments with techniques in creative and collaborative approaches in designing and producing	P5.3	uses a variety of research methods to inform the development and modification of design ideas
P4.1	uses design processes in the development and production of design solutions to meet identified needs and opportunities	P6.1	investigates a range of manufacturing and production processes and relates these to aspects of design projects
P4.2	uses resources effectively and safely in the development and production of design solutions	P6.2	evaluates and uses computer-based technologies in designing and producing

HSC outcomes

H1.1	critically analyses the factors affecting design and the development and success of design projects	H4.2	selects and uses resources responsibly and safely to realise a quality major design project
H1.2	relates the practices and processes of designers and producers to the major design project	H4.3	evaluates the processes undertaken and the impacts of the major design project
H2.1	explains the influence of trends in society on design and production	H5.1	manages the development of a quality major design project
H2.2	evaluates the impact of design and innovation on society and the environment	H5.2	selects and uses appropriate research methods and communication techniques
H3.1	analyses the factors that influence innovation and the success of innovation	H6.1	justifies technological activities undertaken in the major design project through the study of industrial and commercial practices
H3.2	uses creative and innovative approaches in designing and producing	H6.2	critically assesses the emergence and impact of new technologies, and the factors affecting their development
H4.1	identifies a need or opportunity and researches and explores ideas for design development and production of the major design project		

Teacher to confirm before use

ID	Owner	Smallest required action
TTC-01	Head Teacher / course teacher	Map 60 (or 120) equivalent blocks to the local calendar, interruptions, examinations and reporting dates.
TTC-02	Head Teacher	Confirm the current school assessment schedule, formal task notices, adjustments, submission procedures and marking materials.
TTC-03	Course teacher	Confirm class literacy, numeracy, EAL/D, disability, extension, attendance and group-work adjustments.
TTC-04	Workshop teacher	Confirm approved materials, equipment access, induction, SOPs, supervision, risk controls, maintenance and storage.
TTC-05	Course teacher / community	Confirm culturally respectful contexts, permissions, local consultation and treatment of community or cultural knowledge.
TTC-06	Course teacher	Confirm current links, Drive permissions and which supplied resources students may access directly.
TTC-07	Head Teacher	Replace provisional Year 12 blocks with the authorised detailed Year 12 program when the HSC site is built.

Assessment source boundary

Source task	Confirmed weighting	Course connection	Authority	Link
2026 Task 1 - Research Assignment	35%	Modules 1-5: professions, settings, impacts, research and communication	Current school task notice and teacher instructions	Open source
Kitchen Companion	Course project; no formal weighting established by the source used	Modules 6-10: collaboration, CAD, tolerance, prototyping and evaluation	Teacher-approved project brief	Open source
2026 Task 2 - Camping Environment	40%	Modules 11-14: need, project management, production, evaluation and marketing	Current school task notice and teacher instructions	Open source
Remaining formal assessment	Not established from readable supplied sources	Module 15 and teacher-selected course revision	Current school assessment schedule	Open source

The two supplied formal notices account for 75 percentage points. Do not assume the remaining assessment type, timing or weighting without the current school schedule.

Year 11 blocks 1-60

Equivalent blocks are planning units. Map them to the local timetable and adjust without reducing syllabus or project requirements.

Blocks 1-6

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
1	Theory + guided analysis	What Design and Technology studies / Design professions and design practice	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect what design and technology studies with design professions and design practice.	Understand the course, the work of designers and the adaptable processes used to move from a need to an evaluated solution. Key terms: designing, producing, design profession, client.	Section notes, formative responses and one worked application. Outcomes: P1.1, P2.1.
2	Theory + formative response	Design processes across contexts	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	Design processes are adaptable rather than rigid. Designers may move backwards, repeat tests or work on several stages at once. The scale, people, resources, risk and purpose of a setting change how the process is managed, but the need for evidence and evaluation remains. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P1.1, P2.1.
3	Applied studio / folio	Create a design-profession map and compare how two designers move from client need to final presentation.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of design and technology foundations to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P1.1, P2.1.
4	Project / practical / synthesis	Research Assignment launch	Launch the Research Assignment: unpack the supplied task notice, confirm permitted format and create a research plan without drafting content for students.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P1.1, P2.1.
5	Theory + guided analysis	Needs, function and appropriateness / Aesthetics, ergonomics and quality	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect needs, function and appropriateness with aesthetics, ergonomics and quality.	Analyse how needs, function, aesthetics, ergonomics, finance, quality, safety and environmental consequences interact. Key terms: need, function, aesthetics, ergonomics.	Section notes, formative responses and one worked application. Outcomes: P1.1, P2.2.
6	Theory + formative response	Finance, WHS, environment and product life	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	Design decisions create costs and consequences across production, use and end-of-life. Finance includes development, material, production, maintenance and selling considerations. Work health and safety requires hazards to be controlled. Environmental thinking examines short- and long-term effects, including obsolescence and the product life cycle. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P1.1, P2.2, P4.2.

Blocks 7-12

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
7	Applied studio / folio	Complete a product success-and-failure audit that identifies evidence, trade-offs and consequences.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of factors affecting design to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P1.1, P2.2.
8	Project / practical / synthesis	Research Assignment	Analyse a familiar product through interacting design factors and prepare a source-backed designer case-study paragraph.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P1.1, P2.2.
9	Theory + guided analysis	Primary and secondary research / Qualitative and quantitative data	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect primary and secondary research with qualitative and quantitative data.	Use varied, ethical and fit-for-purpose research to establish needs, build criteria and modify ideas. Key terms: primary research, secondary research, qualitative data, quantitative data.	Section notes, formative responses and one worked application. Outcomes: P5.3, P5.2.
10	Theory + formative response	Ethical research and evidence synthesis	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	Design research involving people requires informed consent, privacy, voluntary participation and honest reporting. Evidence synthesis means comparing findings across sources and methods, resolving contradictions where possible and stating uncertainty where evidence remains limited. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P5.3, P5.2.
11	Applied studio / folio	Prepare a research plan that combines methods, identifies participants and shows how findings will affect decisions.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of research that informs design to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P5.3, P5.2.
12	Project / practical / synthesis	Research Assignment	Collect and ethically analyse a small set of user or market data relevant to the Research Assignment.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P5.3, P5.2.

Blocks 13-18

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
13	Theory + guided analysis	Domestic, community, industrial and commercial settings / Technologies in industrial and commercial settings	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect domestic, community, industrial and commercial settings with technologies in industrial and commercial settings.	Relate school design projects to domestic, community, industrial and commercial practices and technologies. Key terms: domestic, community, technology, CAD.	Section notes, formative responses and one worked application. Outcomes: P2.1, P2.2, P6.1.
14	Theory + formative response	Impacts on individuals, society and the environment	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	Design activity affects more than the purchaser. It may change safety, access, work, skills, behaviour, communities, resource use and waste. Strong analysis identifies who or what is affected, explains the mechanism and considers both intended and unintended consequences. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P2.2.
15	Applied studio / folio	Compare one school production process with a domestic and an industrial/commercial process.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of design and production settings to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P2.1, P2.2, P6.1.
16	Project / practical / synthesis	Research Assignment	Compare one school-scale process with domestic, community and industrial/commercial practice using clear limitations.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P2.1, P2.2, P6.1.
17	Theory + guided analysis	Communication methods and audience / Command verbs and evidence-based responses	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect communication methods and audience with command verbs and evidence-based responses.	Choose communication methods for purpose and audience, use command verbs accurately and complete the Research Assignment with evidence. Key terms: audience, annotation, command verb, justify.	Section notes, formative responses and one worked application. Outcomes: P5.2, P5.3, P1.1, P2.2.
18	Theory + formative response	Research Assignment synthesis	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	The authorised Research Assignment asks students to explain Design and Technology fields, examine a specific design profession and Australian designer, identify management, tools, technology and education, and explain the impact of an invention on individuals, society and the environment. The presentation should be coherent rather than a set of disconnected facts. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P1.1, P2.1, P2.2, P5.2, P5.3, P6.2.

Blocks 19-24

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
19	Applied studio / folio	Rehearse and improve a parent-night presentation using source evidence, audience needs and command-verb accuracy.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of communicating research and design knowledge to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P5.2, P5.3, P1.1, P2.2.
20	Project / practical / synthesis	Research Assignment completion	Produce and refine the Research Assignment presentation; use current notice, teacher checkpoints and references as authority.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P5.2, P5.3, P1.1, P2.2.
21	Theory + guided analysis	Idea-generation techniques / Six Thinking Hats and collaboration	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect idea-generation techniques with six thinking hats and collaboration.	Generate alternatives, use cognitive organisers deliberately and collaborate through clear roles and evidence. Key terms: brainstorming, SCAMPER, parallel thinking, White Hat.	Section notes, formative responses and one worked application. Outcomes: P3.1, P5.2.
22	Theory + formative response	Selecting and justifying concepts	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	Concept selection should not be a popularity contest or a defence of the first idea. Designers establish criteria and constraints, compare alternatives, identify trade-offs, combine useful features and explain why the selected direction offers the strongest fit for the need and context. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P3.1, P4.1, P4.3.
23	Applied studio / folio	Run and document a Six Thinking Hats session that produces several feasible Kitchen Companion directions.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of creativity and collaborative design to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P3.1, P5.2.
24	Project / practical / synthesis	Kitchen Companion	Run the Kitchen Companion Six Thinking Hats process and select a shared problem for investigation.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P3.1, P5.2.

Blocks 25-30

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
25	Theory + guided analysis	Design situation, brief and constraints / Target market, equity and accessibility	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect design situation, brief and constraints with target market, equity and accessibility.	Translate evidence about users and contexts into a clear brief, practical boundaries and criteria that guide testing. Key terms: design situation, design brief, target market, accessibility.	Section notes, formative responses and one worked application. Outcomes: P4.1, P4.3, P5.3.
26	Theory + formative response	Criteria to evaluate success	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	Criteria to evaluate success convert the need, research and brief into standards that can guide decisions and testing. Strong criteria are specific, relevant and supported. Some can be measured numerically; others need structured user or expert judgement. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P4.1, P4.3, P5.1.
27	Applied studio / folio	Build a user-needs, constraints and criteria matrix for the Kitchen Companion design.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of briefs, users and criteria to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P4.1, P4.3, P5.3.
28	Project / practical / synthesis	Kitchen Companion	Develop the Kitchen Companion brief, criteria and user profile; create initial soft prototypes.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P4.1, P4.3, P5.3.
29	Theory + guided analysis	Freehand sketching and annotation / Isometric, oblique and orthogonal drawing	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect freehand sketching and annotation with isometric, oblique and orthogonal drawing.	Use freehand, pictorial, orthogonal and digital communication to develop and explain ideas. Key terms: construction line, annotation, isometric, oblique.	Section notes, formative responses and one worked application. Outcomes: P5.2, P6.2.
30	Theory + formative response	Models, presentations and folio communication	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	Different communication methods reveal different information. A rough model can test scale or interaction. A CAD model can communicate geometry and support manufacture. A presentation can explain reasoning to an audience. A folio should connect these artefacts into an evidence trail. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P5.2, P6.2.

Blocks 31-36

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
31	Applied studio / folio	Produce an annotated concept sheet containing a freehand idea, a pictorial view and essential working information.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of graphical and design communication to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P5.2, P6.2.
32	Project / practical / synthesis	Kitchen Companion / Camping launch	Produce annotated concepts and technical drawings suited to communication and manufacture.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P5.2, P6.2.
33	Theory + guided analysis	CAD modelling and design intent / Rapid prototyping and 3D printing	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect cad modelling and design intent with rapid prototyping and 3d printing.	Build controlled digital models, transfer information to production and use rapid prototypes to test assumptions. Key terms: design intent, constraint, rapid prototyping, slicing.	Section notes, formative responses and one worked application. Outcomes: P6.2, P4.1, P4.2.
34	Theory + formative response	Tolerance, fit and the Kitchen Companion	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	Tolerance describes allowable variation from a specified size. Clearance is the intentional gap between mating parts. The Kitchen Companion brief nominates a 0.2 mm tolerance for moving parts, but the authorised value still needs to be interpreted and tested using the actual printer, material, orientation and geometry. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P4.1, P4.2, P4.3, P6.2.
35	Applied studio / folio	Create and document a 0.2 mm tolerance test before committing the Kitchen Companion final print.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of cad and rapid prototyping to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P6.2, P4.1, P4.2.
36	Project / practical / synthesis	Kitchen Companion	Develop CAD models and run 0.2 mm tolerance test prints for moving or fitted parts where relevant.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P6.2, P4.1, P4.2.

Blocks 37-42

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
37	Theory + guided analysis	Material selection and evidence / Manufacturing processes and scale	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect material selection and evidence with manufacturing processes and scale.	Select resources through evidence, plan fair tests and use evaluation to refine prototypes before final production. Key terms: property, workability, manufacturing process, jig.	Section notes, formative responses and one worked application. Outcomes: P4.2, P4.3, P6.1.
38	Theory + formative response	Prototype testing and continual evaluation	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	A prototype is valuable because it reduces uncertainty. Tests should correspond to criteria and control relevant variables. User feedback can reveal comfort, understanding and preference, while performance tests can measure function, strength, stability, durability or accuracy. Evaluation continues as evidence is collected. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P4.3, P5.3.
39	Applied studio / folio	Complete one controlled material or feature test and document the decision it changes.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of testing, materials and evaluation to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P4.2, P4.3, P6.1.
40	Project / practical / synthesis	Kitchen Companion completion / Camping launch	Test materials, prototypes and function; interpret results and modify the Kitchen Companion design.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P4.2, P4.3, P6.1.
41	Theory + guided analysis	Identifying a genuine camping need / From situation to design brief	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect identifying a genuine camping need with from situation to design brief.	Identify a genuine camping need and convert evidence, constraints and project criteria into a feasible compact product direction. Key terms: identified need, target market, design situation, design brief.	Section notes, formative responses and one worked application. Outcomes: P1.1, P4.1, P5.3.
42	Theory + formative response	Camping proposal and degree of difference	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	A proposal explains the direction the project will explore and why it deserves development. Its degree of difference is the meaningful improvement or distinction from existing products. Difference has value only when it better addresses the identified need, not when novelty is added for its own sake. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P4.1, P5.3.

Blocks 43-48

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
43	Applied studio / folio	Investigate a camping problem, define a target market and develop a justified proposal using current task requirements.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of camping design project to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P1.1, P4.1, P5.3.
44	Project / practical / synthesis	Camping Environment - need and proposal	Launch the Camping Environment task: identify and justify a genuine need, target market and feasible proposal.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P1.1, P4.1, P5.3.
45	Theory + guided analysis	Action plans, time plans and milestones / Finance and resource management	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect action plans, time plans and milestones with finance and resource management.	Use action, time, finance, resource and WHS planning as active decision tools during project development and production. Key terms: action plan, time plan, finance plan, unit cost.	Section notes, formative responses and one worked application. Outcomes: P4.2, P5.1.
46	Theory + formative response	WHS, risk controls and production readiness	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	WHS involves more than wearing personal protective equipment. The designer and producer should identify hazards in materials, tools, processes and the work environment, assess risk, use the strongest reasonably practicable controls and follow current school procedures and training. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P4.2, P5.1.
47	Applied studio / folio	Construct an integrated action, time, finance, resource and risk plan for the camping project, then update it after a simulated disruption.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of project management and safe production to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P4.2, P5.1.
48	Project / practical / synthesis	Camping Environment - management and production readiness	Finalise action, time, finance, resource and WHS plans before production; confirm teacher approvals.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P4.2, P5.1.

Blocks 49-54

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
49	Theory + guided analysis	Production sequence and quality assurance / Industrial and commercial production links	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect production sequence and quality assurance with industrial and commercial production links.	Plan and document a controlled production sequence that links workshop decisions to industrial and commercial practice. Key terms: production sequence, quality assurance, industrial setting, commercial setting.	Section notes, formative responses and one worked application. Outcomes: P4.2, P6.1.
50	Theory + formative response	Recording practical skills and production decisions	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	Production evidence should allow another person to understand what was done, why it was done, what result was observed and what followed. Photographs are useful only when selected and captioned to show a decision, process, quality issue, modification or skill. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P4.2, P5.2.
51	Applied studio / folio	Develop a production plan with process trials, quality checkpoints, evidence captions and an industrial/commercial comparison.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of manufacturing, quality and production evidence to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P4.2, P6.1.
52	Project / practical / synthesis	Camping Environment - production and quality	Produce the camping solution with planned quality checkpoints and concise work-in-progress evidence.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P4.2, P6.1.
53	Theory + guided analysis	Ongoing and final evaluation / Marketing and commercial viability	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect ongoing and final evaluation with marketing and commercial viability.	Evaluate the completed solution and communicate a credible market position using evidence rather than unsupported claims. Key terms: final evaluation, limitation, marketing mix, commercial viability.	Section notes, formative responses and one worked application. Outcomes: P2.2, P4.3, P5.2.
54	Theory + formative response	Life-cycle thinking and responsible design claims	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	A product's impact is distributed across raw-material extraction, processing, manufacture, transport, use, maintenance and end-of-life. Designers should avoid treating one recycled component or low-waste process as proof that the whole product is sustainable. Claims need scope, evidence and acknowledgement of trade-offs. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P2.2, P4.3.

Blocks 55-60

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
55	Applied studio / folio	Complete a criteria-based evaluation, life-cycle review and qualified marketing proposal for the camping product.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of marketing, sustainability and final evaluation to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P2.2, P4.3, P5.2.
56	Project / practical / synthesis	Camping Environment - evaluation and communication	Complete criteria-based testing, final evaluation, life-cycle review and a qualified marketing proposal.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P2.2, P4.3, P5.2.
57	Theory + guided analysis	Connecting the Preliminary course / Responding to command verbs and stimuli	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect connecting the preliminary course with responding to command verbs and stimuli.	Integrate Preliminary knowledge, practise evidence-rich responses and carry disciplined project habits into the HSC course. Key terms: synthesis, trade-off, command verb, stimulus.	Section notes, formative responses and one worked application. Outcomes: P1.1, P4.3, P5.2.
58	Theory + formative response	Readiness for the HSC course and Major Design Project	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	The HSC course applies and synthesises Preliminary learning through innovation study and the Major Design Project. Year 11 does not require students to preselect an MDP. It should build reliable habits: identifying a genuine need, using ethical research, managing scope, testing risk early, documenting decisions and evaluating honestly. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P4.3, P5.1, P5.3.
59	Applied studio / folio	Complete a course audit, extended-response practice and MDP-readiness reflection based on evidence from the year.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of preliminary synthesis and year 12 bridge to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P1.1, P4.3, P5.2.
60	Project / practical / synthesis	Course synthesis and transition	Complete course revision, response practice, evidence audit and transition reflection for the HSC course.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P1.1, P4.3, P5.2.

Year 12 blocks 61-120

Provisional continuity map - replace with the detailed Year 12 program when authorised.

Blocks 61-66

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
61	Theory	HSC orientation and opportunity discovery: concepts and authorised requirements	Explicit teaching and source analysis for hsc orientation and opportunity discovery. Confirm current NESA advice, school assessment requirements and project milestones before delivery.	Reconnect Preliminary habits with HSC innovation study and the MDP; explore needs without locking in a solution.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H1.1, H4.1, H5.2.
62	Theory + response	HSC orientation and opportunity discovery: evidence, communication and formative response	Use stimulus, modelled reasoning and command-verb practice. Students identify evidence gaps and make a supported decision rather than completing a generic worksheet.	Reconnect Preliminary habits with HSC innovation study and the MDP; explore needs without locking in a solution.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H1.1, H4.1, H5.2.
63	Applied MDP / case study	HSC orientation and opportunity discovery: MDP or innovation application	Apply the content directly to the Major Design Project or innovation case study, with teacher feedback focused on feasibility, evidence and scope.	Reconnect Preliminary habits with HSC innovation study and the MDP; explore needs without locking in a solution.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H1.1, H4.1, H5.2.
64	Project checkpoint	HSC orientation and opportunity discovery: checkpoint, evaluation and next actions	Review project evidence, update management and evaluate progress. Record decisions, limitations and the next smallest useful action.	Reconnect Preliminary habits with HSC innovation study and the MDP; explore needs without locking in a solution.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H1.1, H4.1, H5.2.
65	Theory	MDP proposal and scope: concepts and authorised requirements	Explicit teaching and source analysis for mdp proposal and scope. Confirm current NESA advice, school assessment requirements and project milestones before delivery.	Define a significant need or opportunity, stakeholders, project boundaries, feasibility and proposal evidence.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.1, H5.1.
66	Theory + response	MDP proposal and scope: evidence, communication and formative response	Use stimulus, modelled reasoning and command-verb practice. Students identify evidence gaps and make a supported decision rather than completing a generic worksheet.	Define a significant need or opportunity, stakeholders, project boundaries, feasibility and proposal evidence.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.1, H5.1.

Blocks 67-72

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
67	Applied MDP / case study	MDP proposal and scope: MDP or innovation application	Apply the content directly to the Major Design Project or innovation case study, with teacher feedback focused on feasibility, evidence and scope.	Define a significant need or opportunity, stakeholders, project boundaries, feasibility and proposal evidence.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.1, H5.1.
68	Project checkpoint	MDP proposal and scope: checkpoint, evaluation and next actions	Review project evidence, update management and evaluate progress. Record decisions, limitations and the next smallest useful action.	Define a significant need or opportunity, stakeholders, project boundaries, feasibility and proposal evidence.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.1, H5.1.
69	Theory	Research, criteria and design direction: concepts and authorised requirements	Explicit teaching and source analysis for research, criteria and design direction. Confirm current NESA advice, school assessment requirements and project milestones before delivery.	Use ethical research, evidence synthesis and criteria to guide a defensible design direction.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.1, H5.2.
70	Theory + response	Research, criteria and design direction: evidence, communication and formative response	Use stimulus, modelled reasoning and command-verb practice. Students identify evidence gaps and make a supported decision rather than completing a generic worksheet.	Use ethical research, evidence synthesis and criteria to guide a defensible design direction.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.1, H5.2.
71	Applied MDP / case study	Research, criteria and design direction: MDP or innovation application	Apply the content directly to the Major Design Project or innovation case study, with teacher feedback focused on feasibility, evidence and scope.	Use ethical research, evidence synthesis and criteria to guide a defensible design direction.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.1, H5.2.
72	Project checkpoint	Research, criteria and design direction: checkpoint, evaluation and next actions	Review project evidence, update management and evaluate progress. Record decisions, limitations and the next smallest useful action.	Use ethical research, evidence synthesis and criteria to guide a defensible design direction.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.1, H5.2.

Blocks 73-78

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
73	Theory	Project management and finance: concepts and authorised requirements	Explicit teaching and source analysis for project management and finance. Confirm current NESA advice, school assessment requirements and project milestones before delivery.	Develop active action, time and finance plans with dependencies, contingencies and decision points.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H5.1.
74	Theory + response	Project management and finance: evidence, communication and formative response	Use stimulus, modelled reasoning and command-verb practice. Students identify evidence gaps and make a supported decision rather than completing a generic worksheet.	Develop active action, time and finance plans with dependencies, contingencies and decision points.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H5.1.
75	Applied MDP / case study	Project management and finance: MDP or innovation application	Apply the content directly to the Major Design Project or innovation case study, with teacher feedback focused on feasibility, evidence and scope.	Develop active action, time and finance plans with dependencies, contingencies and decision points.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H5.1.
76	Project checkpoint	Project management and finance: checkpoint, evaluation and next actions	Review project evidence, update management and evaluate progress. Record decisions, limitations and the next smallest useful action.	Develop active action, time and finance plans with dependencies, contingencies and decision points.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H5.1.
77	Theory	Creative concept development: concepts and authorised requirements	Explicit teaching and source analysis for creative concept development. Confirm current NESA advice, school assessment requirements and project milestones before delivery.	Generate, communicate and compare genuinely different concepts using creative and innovative approaches.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H3.2, H4.1.
78	Theory + response	Creative concept development: evidence, communication and formative response	Use stimulus, modelled reasoning and command-verb practice. Students identify evidence gaps and make a supported decision rather than completing a generic worksheet.	Generate, communicate and compare genuinely different concepts using creative and innovative approaches.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H3.2, H4.1.

Blocks 79-84

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
79	Applied MDP / case study	Creative concept development: MDP or innovation application	Apply the content directly to the Major Design Project or innovation case study, with teacher feedback focused on feasibility, evidence and scope.	Generate, communicate and compare genuinely different concepts using creative and innovative approaches.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H3.2, H4.1.
80	Project checkpoint	Creative concept development: checkpoint, evaluation and next actions	Review project evidence, update management and evaluate progress. Record decisions, limitations and the next smallest useful action.	Generate, communicate and compare genuinely different concepts using creative and innovative approaches.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H3.2, H4.1.
81	Theory	Experimentation and prototyping: concepts and authorised requirements	Explicit teaching and source analysis for experimentation and prototyping. Confirm current NESA advice, school assessment requirements and project milestones before delivery.	Test high-risk functions, materials, ergonomics and processes before committing to full production.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.2, H4.3.
82	Theory + response	Experimentation and prototyping: evidence, communication and formative response	Use stimulus, modelled reasoning and command-verb practice. Students identify evidence gaps and make a supported decision rather than completing a generic worksheet.	Test high-risk functions, materials, ergonomics and processes before committing to full production.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.2, H4.3.
83	Applied MDP / case study	Experimentation and prototyping: MDP or innovation application	Apply the content directly to the Major Design Project or innovation case study, with teacher feedback focused on feasibility, evidence and scope.	Test high-risk functions, materials, ergonomics and processes before committing to full production.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.2, H4.3.
84	Project checkpoint	Experimentation and prototyping: checkpoint, evaluation and next actions	Review project evidence, update management and evaluate progress. Record decisions, limitations and the next smallest useful action.	Test high-risk functions, materials, ergonomics and processes before committing to full production.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.2, H4.3.

Blocks 85-90

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
85	Theory	Resources and technological decisions: concepts and authorised requirements	Explicit teaching and source analysis for resources and technological decisions. Confirm current NESA advice, school assessment requirements and project milestones before delivery.	Justify materials, components, services, software and technologies through evidence and whole-project constraints.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.2, H6.1.
86	Theory + response	Resources and technological decisions: evidence, communication and formative response	Use stimulus, modelled reasoning and command-verb practice. Students identify evidence gaps and make a supported decision rather than completing a generic worksheet.	Justify materials, components, services, software and technologies through evidence and whole-project constraints.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.2, H6.1.
87	Applied MDP / case study	Resources and technological decisions: MDP or innovation application	Apply the content directly to the Major Design Project or innovation case study, with teacher feedback focused on feasibility, evidence and scope.	Justify materials, components, services, software and technologies through evidence and whole-project constraints.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.2, H6.1.
88	Project checkpoint	Resources and technological decisions: checkpoint, evaluation and next actions	Review project evidence, update management and evaluate progress. Record decisions, limitations and the next smallest useful action.	Justify materials, components, services, software and technologies through evidence and whole-project constraints.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.2, H6.1.
89	Theory	Production planning and WHS: concepts and authorised requirements	Explicit teaching and source analysis for production planning and whs. Confirm current NESA advice, school assessment requirements and project milestones before delivery.	Resolve specifications, sequence, quality assurance, safe work and production evidence.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.2, H5.1, H6.1.
90	Theory + response	Production planning and WHS: evidence, communication and formative response	Use stimulus, modelled reasoning and command-verb practice. Students identify evidence gaps and make a supported decision rather than completing a generic worksheet.	Resolve specifications, sequence, quality assurance, safe work and production evidence.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.2, H5.1, H6.1.

Blocks 91-96

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
91	Applied MDP / case study	Production planning and WHS: MDP or innovation application	Apply the content directly to the Major Design Project or innovation case study, with teacher feedback focused on feasibility, evidence and scope.	Resolve specifications, sequence, quality assurance, safe work and production evidence.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.2, H5.1, H6.1.
92	Project checkpoint	Production planning and WHS: checkpoint, evaluation and next actions	Review project evidence, update management and evaluate progress. Record decisions, limitations and the next smallest useful action.	Resolve specifications, sequence, quality assurance, safe work and production evidence.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.2, H5.1, H6.1.
93	Theory	Project development and realisation I: concepts and authorised requirements	Explicit teaching and source analysis for project development and realisation i. Confirm current NESA advice, school assessment requirements and project milestones before delivery.	Produce the MDP while documenting practical skill, quality, changes and industrial/commercial links.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.2, H5.1, H6.1.
94	Theory + response	Project development and realisation I: evidence, communication and formative response	Use stimulus, modelled reasoning and command-verb practice. Students identify evidence gaps and make a supported decision rather than completing a generic worksheet.	Produce the MDP while documenting practical skill, quality, changes and industrial/commercial links.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.2, H5.1, H6.1.
95	Applied MDP / case study	Project development and realisation I: MDP or innovation application	Apply the content directly to the Major Design Project or innovation case study, with teacher feedback focused on feasibility, evidence and scope.	Produce the MDP while documenting practical skill, quality, changes and industrial/commercial links.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.2, H5.1, H6.1.
96	Project checkpoint	Project development and realisation I: checkpoint, evaluation and next actions	Review project evidence, update management and evaluate progress. Record decisions, limitations and the next smallest useful action.	Produce the MDP while documenting practical skill, quality, changes and industrial/commercial links.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.2, H5.1, H6.1.

Blocks 97-102

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
97	Theory	Project development and realisation II: concepts and authorised requirements	Explicit teaching and source analysis for project development and realisation ii. Confirm current NESA advice, school assessment requirements and project milestones before delivery.	Continue production, control scope and quality, and apply evidence from ongoing evaluation.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.2, H4.3, H5.1.
98	Theory + response	Project development and realisation II: evidence, communication and formative response	Use stimulus, modelled reasoning and command-verb practice. Students identify evidence gaps and make a supported decision rather than completing a generic worksheet.	Continue production, control scope and quality, and apply evidence from ongoing evaluation.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.2, H4.3, H5.1.
99	Applied MDP / case study	Project development and realisation II: MDP or innovation application	Apply the content directly to the Major Design Project or innovation case study, with teacher feedback focused on feasibility, evidence and scope.	Continue production, control scope and quality, and apply evidence from ongoing evaluation.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.2, H4.3, H5.1.
100	Project checkpoint	Project development and realisation II: checkpoint, evaluation and next actions	Review project evidence, update management and evaluate progress. Record decisions, limitations and the next smallest useful action.	Continue production, control scope and quality, and apply evidence from ongoing evaluation.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H4.2, H4.3, H5.1.
101	Theory	Innovation case study foundations: concepts and authorised requirements	Explicit teaching and source analysis for innovation case study foundations. Confirm current NESA advice, school assessment requirements and project milestones before delivery.	Select and define an innovation; investigate context, development, stakeholders and evidence reliability.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H2.1, H3.1, H5.2.
102	Theory + response	Innovation case study foundations: evidence, communication and formative response	Use stimulus, modelled reasoning and command-verb practice. Students identify evidence gaps and make a supported decision rather than completing a generic worksheet.	Select and define an innovation; investigate context, development, stakeholders and evidence reliability.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H2.1, H3.1, H5.2.

Blocks 103-108

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
103	Applied MDP / case study	Innovation case study foundations: MDP or innovation application	Apply the content directly to the Major Design Project or innovation case study, with teacher feedback focused on feasibility, evidence and scope.	Select and define an innovation; investigate context, development, stakeholders and evidence reliability.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H2.1, H3.1, H5.2.
104	Project checkpoint	Innovation case study foundations: checkpoint, evaluation and next actions	Review project evidence, update management and evaluate progress. Record decisions, limitations and the next smallest useful action.	Select and define an innovation; investigate context, development, stakeholders and evidence reliability.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H2.1, H3.1, H5.2.
105	Theory	Innovation success and entrepreneurial activity: concepts and authorised requirements	Explicit teaching and source analysis for innovation success and entrepreneurial activity. Confirm current NESA advice, school assessment requirements and project milestones before delivery.	Analyse timing, technologies, agencies, marketing, finance and entrepreneurial decisions affecting success.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H3.1.
106	Theory + response	Innovation success and entrepreneurial activity: evidence, communication and formative response	Use stimulus, modelled reasoning and command-verb practice. Students identify evidence gaps and make a supported decision rather than completing a generic worksheet.	Analyse timing, technologies, agencies, marketing, finance and entrepreneurial decisions affecting success.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H3.1.
107	Applied MDP / case study	Innovation success and entrepreneurial activity: MDP or innovation application	Apply the content directly to the Major Design Project or innovation case study, with teacher feedback focused on feasibility, evidence and scope.	Analyse timing, technologies, agencies, marketing, finance and entrepreneurial decisions affecting success.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H3.1.
108	Project checkpoint	Innovation success and entrepreneurial activity: checkpoint, evaluation and next actions	Review project evidence, update management and evaluate progress. Record decisions, limitations and the next smallest useful action.	Analyse timing, technologies, agencies, marketing, finance and entrepreneurial decisions affecting success.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H3.1.

Blocks 109-114

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
109	Theory	Ethical, social and environmental impacts: concepts and authorised requirements	Explicit teaching and source analysis for ethical, social and environmental impacts. Confirm current NESA advice, school assessment requirements and project milestones before delivery.	Evaluate rights, responsibilities, equity, intellectual property, sustainability and impacts on Australian society.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H2.2, H6.2.
110	Theory + response	Ethical, social and environmental impacts: evidence, communication and formative response	Use stimulus, modelled reasoning and command-verb practice. Students identify evidence gaps and make a supported decision rather than completing a generic worksheet.	Evaluate rights, responsibilities, equity, intellectual property, sustainability and impacts on Australian society.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H2.2, H6.2.
111	Applied MDP / case study	Ethical, social and environmental impacts: MDP or innovation application	Apply the content directly to the Major Design Project or innovation case study, with teacher feedback focused on feasibility, evidence and scope.	Evaluate rights, responsibilities, equity, intellectual property, sustainability and impacts on Australian society.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H2.2, H6.2.
112	Project checkpoint	Ethical, social and environmental impacts: checkpoint, evaluation and next actions	Review project evidence, update management and evaluate progress. Record decisions, limitations and the next smallest useful action.	Evaluate rights, responsibilities, equity, intellectual property, sustainability and impacts on Australian society.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H2.2, H6.2.
113	Theory	Emerging technologies and examination synthesis: concepts and authorised requirements	Explicit teaching and source analysis for emerging technologies and examination synthesis. Confirm current NESA advice, school assessment requirements and project milestones before delivery.	Critically assess technological emergence and impact; practise sustained evidence-rich HSC responses.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H1.1, H2.2, H6.2.
114	Theory + response	Emerging technologies and examination synthesis: evidence, communication and formative response	Use stimulus, modelled reasoning and command-verb practice. Students identify evidence gaps and make a supported decision rather than completing a generic worksheet.	Critically assess technological emergence and impact; practise sustained evidence-rich HSC responses.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H1.1, H2.2, H6.2.

Blocks 115-120

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
115	Applied MDP / case study	Emerging technologies and examination synthesis: MDP or innovation application	Apply the content directly to the Major Design Project or innovation case study, with teacher feedback focused on feasibility, evidence and scope.	Critically assess technological emergence and impact; practise sustained evidence-rich HSC responses.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H1.1, H2.2, H6.2.
116	Project checkpoint	Emerging technologies and examination synthesis: checkpoint, evaluation and next actions	Review project evidence, update management and evaluate progress. Record decisions, limitations and the next smallest useful action.	Critically assess technological emergence and impact; practise sustained evidence-rich HSC responses.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H1.1, H2.2, H6.2.
117	Theory	MDP completion and final evaluation: concepts and authorised requirements	Explicit teaching and source analysis for mdp completion and final evaluation. Confirm current NESA advice, school assessment requirements and project milestones before delivery.	Complete, present and evaluate the MDP against need, criteria, process evidence and whole-of-life impacts.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H1.2, H4.3, H5.1, H5.2.
118	Theory + response	MDP completion and final evaluation: evidence, communication and formative response	Use stimulus, modelled reasoning and command-verb practice. Students identify evidence gaps and make a supported decision rather than completing a generic worksheet.	Complete, present and evaluate the MDP against need, criteria, process evidence and whole-of-life impacts.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H1.2, H4.3, H5.1, H5.2.
119	Applied MDP / case study	MDP completion and final evaluation: MDP or innovation application	Apply the content directly to the Major Design Project or innovation case study, with teacher feedback focused on feasibility, evidence and scope.	Complete, present and evaluate the MDP against need, criteria, process evidence and whole-of-life impacts.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H1.2, H4.3, H5.1, H5.2.
120	Project checkpoint	MDP completion and final evaluation: checkpoint, evaluation and next actions	Review project evidence, update management and evaluate progress. Record decisions, limitations and the next smallest useful action.	Complete, present and evaluate the MDP against need, criteria, process evidence and whole-of-life impacts.	Provisional evidence focus; replace with the detailed Year 12 program when built. Outcomes: H1.2, H4.3, H5.1, H5.2.

Source register and control boundary

Authority order: current NESA syllabus and ACE requirements → current school assessment/task documents → current teacher-approved project, practical and WHS instructions → course support materials → this program/site.

Source	Used for	Status / boundary	Link
Design and Technology Stage 6 Syllabus (2013) - official course page Official syllabus authority	Course requirements, Preliminary/HSC scope, project requirements and official course boundary	Current syllabus taught in Years 11-12 at build date	Open source
Year 11 Design and Technology authorised Google Drive folder School source collection	Task notices, project briefs, worksheets, media and teacher resources	Teacher-controlled	Open source
2026 Preliminary Task 1 - Research Assignment Formal school assessment notice	Research Assignment project page, confirmed 35% weighting, outcomes and communication requirements	2026 source record - current notice remains authority	Open source
Year 11 Design and Technology - Project 1: The Kitchen Companion Teacher-approved course project brief	Collaborative design, Six Thinking Hats, CAD, 3D printing, 0.2 mm moving-part tolerance and eight-page group folio	Source brief	Open source
2026 Preliminary Task 2 - Camping Environment Formal school assessment notice	Camping project, confirmed 40% weighting, A\$30 construction limit, compact/marketable criteria and MDP-aligned folio structure	2026 source record - current notice remains authority	Open source
Design Technology Preliminary Teacher Answer Booklet Teacher-authored course support	Course terminology, command verbs, exam response quality, design factors, research, WHS, CAD/CAM/CNC, sustainability and evaluation	Indicative/model answers; not the only acceptable answers	Open source
Intro to Basic Sketching Teacher-curated resource folder	Graphical communication and sketching practice	Drive permissions apply	Open source
CAD competency check Teacher-curated resource folder	CAD readiness and evidence	Drive permissions apply	Open source

Deliberate exclusions

- Student folios, student names and assessed student products were not used as site or program content.
- The supplied Stage 6 textbook was not reproduced.
- The Year 11 assessment schedule PDF was not interpreted; readable task notices are the only formal task weightings represented.
- The program does not replace OnGuard, local SOPs, induction, supervision, equipment approval or current risk controls.
- Year 12 detail remains provisional until the authorised HSC site and program are built.
