

DESIGN & TECHNOLOGY

Year 11 Design and Technology

120-hour teaching program | v1.0 Network Benchmark

A complete Preliminary learning sequence using the supplied Research Assignment, Kitchen Companion and Camping Environment contexts.

Built 31 August 2026 Y11-DT-2026-08-31-v1			
Course	11080 Design and Technology (2 units - Preliminary)	Delivery	30 weeks 120 indicative hours 60 x 2-hour equivalent blocks
Syllabus	Design and Technology Stage 6 Syllabus (2013)	Build	31 August 2026 current syllabus check required annually
Site structure	15 modules 45 theory sections 450 checks	Evidence	45 saved responses 10 folio cards 20 Busy Work tasks
Authority	Current NESA and school documents	Year 12	Separate HSC site/program to be built next; master continuity map supplied

Official course page: [Design and Technology Stage 6 Syllabus \(2013\)](#)
Authorised school source collection: [Year 11 Design and Technology Drive folder](#)

Official Preliminary outcomes

P1.1	examines design theory and practice, and considers the factors affecting designing and producing in design projects	P4.3	evaluates the processes and outcomes of designing and producing
P2.1	identifies design and production processes in domestic, community, industrial and commercial settings	P5.1	uses a variety of management techniques and tools to develop design projects
P2.2	explains the impact of a range of design and technology activities on the individual, society and the environment through the development of projects	P5.2	communicates ideas and solutions using a range of techniques
P3.1	investigates and experiments with techniques in creative and collaborative approaches in designing and producing	P5.3	uses a variety of research methods to inform the development and modification of design ideas
P4.1	uses design processes in the development and production of design solutions to meet identified needs and opportunities	P6.1	investigates a range of manufacturing and production processes and relates these to aspects of design projects
P4.2	uses resources effectively and safely in the development and production of design solutions	P6.2	evaluates and uses computer-based technologies in designing and producing

Teacher to confirm before use

ID	Owner	Smallest required action
TTC-01	Head Teacher / course teacher	Map 60 (or 120) equivalent blocks to the local calendar, interruptions, examinations and reporting dates.
TTC-02	Head Teacher	Confirm the current school assessment schedule, formal task notices, adjustments, submission procedures and marking materials.
TTC-03	Course teacher	Confirm class literacy, numeracy, EAL/D, disability, extension, attendance and group-work adjustments.
TTC-04	Workshop teacher	Confirm approved materials, equipment access, induction, SOPs, supervision, risk controls, maintenance and storage.
TTC-05	Course teacher / community	Confirm culturally respectful contexts, permissions, local consultation and treatment of community or cultural knowledge.
TTC-06	Course teacher	Confirm current links, Drive permissions and which supplied resources students may access directly.

Assessment source boundary

Source task	Confirmed weighting	Course connection	Authority	Link
2026 Task 1 - Research Assignment	35%	Modules 1-5: professions, settings, impacts, research and communication	Current school task notice and teacher instructions	Open source
Kitchen Companion	Course project; no formal weighting established by the source used	Modules 6-10: collaboration, CAD, tolerance, prototyping and evaluation	Teacher-approved project brief	Open source
2026 Task 2 - Camping Environment	40%	Modules 11-14: need, project management, production, evaluation and marketing	Current school task notice and teacher instructions	Open source
Remaining formal assessment	Not established from readable supplied sources	Module 15 and teacher-selected course revision	Current school assessment schedule	Open source

The two supplied formal notices account for 75 percentage points. Do not assume the remaining assessment type, timing or weighting without the current school schedule.

Year 11 teaching and learning sequence

Equivalent blocks are planning units. Map them to the local timetable and adjust without reducing syllabus or project requirements.

Blocks 1-6

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
1	Theory + guided analysis	What Design and Technology studies / Design professions and design practice	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect what design and technology studies with design professions and design practice.	Understand the course, the work of designers and the adaptable processes used to move from a need to an evaluated solution. Key terms: designing, producing, design profession, client.	Section notes, formative responses and one worked application. Outcomes: P1.1, P2.1.
2	Theory + formative response	Design processes across contexts	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	Design processes are adaptable rather than rigid. Designers may move backwards, repeat tests or work on several stages at once. The scale, people, resources, risk and purpose of a setting change how the process is managed, but the need for evidence and evaluation remains. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P1.1, P2.1.
3	Applied studio / folio	Create a design-profession map and compare how two designers move from client need to final presentation.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of design and technology foundations to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P1.1, P2.1.
4	Project / practical / synthesis	Research Assignment launch	Launch the Research Assignment: unpack the supplied task notice, confirm permitted format and create a research plan without drafting content for students.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P1.1, P2.1.
5	Theory + guided analysis	Needs, function and appropriateness / Aesthetics, ergonomics and quality	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect needs, function and appropriateness with aesthetics, ergonomics and quality.	Analyse how needs, function, aesthetics, ergonomics, finance, quality, safety and environmental consequences interact. Key terms: need, function, aesthetics, ergonomics.	Section notes, formative responses and one worked application. Outcomes: P1.1, P2.2.
6	Theory + formative response	Finance, WHS, environment and product life	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	Design decisions create costs and consequences across production, use and end-of-life. Finance includes development, material, production, maintenance and selling considerations. Work health and safety requires hazards to be controlled. Environmental thinking examines short- and long-term effects, including obsolescence and the product life cycle. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P1.1, P2.2, P4.2.

Blocks 7-12

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
7	Applied studio / folio	Complete a product success-and-failure audit that identifies evidence, trade-offs and consequences.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of factors affecting design to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P1.1, P2.2.
8	Project / practical / synthesis	Research Assignment	Analyse a familiar product through interacting design factors and prepare a source-backed designer case-study paragraph.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P1.1, P2.2.
9	Theory + guided analysis	Primary and secondary research / Qualitative and quantitative data	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect primary and secondary research with qualitative and quantitative data.	Use varied, ethical and fit-for-purpose research to establish needs, build criteria and modify ideas. Key terms: primary research, secondary research, qualitative data, quantitative data.	Section notes, formative responses and one worked application. Outcomes: P5.3, P5.2.
10	Theory + formative response	Ethical research and evidence synthesis	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	Design research involving people requires informed consent, privacy, voluntary participation and honest reporting. Evidence synthesis means comparing findings across sources and methods, resolving contradictions where possible and stating uncertainty where evidence remains limited. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P5.3, P5.2.
11	Applied studio / folio	Prepare a research plan that combines methods, identifies participants and shows how findings will affect decisions.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of research that informs design to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P5.3, P5.2.
12	Project / practical / synthesis	Research Assignment	Collect and ethically analyse a small set of user or market data relevant to the Research Assignment.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P5.3, P5.2.

Blocks 13-18

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
13	Theory + guided analysis	Domestic, community, industrial and commercial settings / Technologies in industrial and commercial settings	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect domestic, community, industrial and commercial settings with technologies in industrial and commercial settings.	Relate school design projects to domestic, community, industrial and commercial practices and technologies. Key terms: domestic, community, technology, CAD.	Section notes, formative responses and one worked application. Outcomes: P2.1, P2.2, P6.1.
14	Theory + formative response	Impacts on individuals, society and the environment	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	Design activity affects more than the purchaser. It may change safety, access, work, skills, behaviour, communities, resource use and waste. Strong analysis identifies who or what is affected, explains the mechanism and considers both intended and unintended consequences. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P2.2.
15	Applied studio / folio	Compare one school production process with a domestic and an industrial/commercial process.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of design and production settings to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P2.1, P2.2, P6.1.
16	Project / practical / synthesis	Research Assignment	Compare one school-scale process with domestic, community and industrial/commercial practice using clear limitations.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P2.1, P2.2, P6.1.
17	Theory + guided analysis	Communication methods and audience / Command verbs and evidence-based responses	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect communication methods and audience with command verbs and evidence-based responses.	Choose communication methods for purpose and audience, use command verbs accurately and complete the Research Assignment with evidence. Key terms: audience, annotation, command verb, justify.	Section notes, formative responses and one worked application. Outcomes: P5.2, P5.3, P1.1, P2.2.
18	Theory + formative response	Research Assignment synthesis	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	The authorised Research Assignment asks students to explain Design and Technology fields, examine a specific design profession and Australian designer, identify management, tools, technology and education, and explain the impact of an invention on individuals, society and the environment. The presentation should be coherent rather than a set of disconnected facts. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P1.1, P2.1, P2.2, P5.2, P5.3, P6.2.

Blocks 19-24

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
19	Applied studio / folio	Rehearse and improve a parent-night presentation using source evidence, audience needs and command-verb accuracy.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of communicating research and design knowledge to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P5.2, P5.3, P1.1, P2.2.
20	Project / practical / synthesis	Research Assignment completion	Produce and refine the Research Assignment presentation; use current notice, teacher checkpoints and references as authority.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P5.2, P5.3, P1.1, P2.2.
21	Theory + guided analysis	Idea-generation techniques / Six Thinking Hats and collaboration	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect idea-generation techniques with six thinking hats and collaboration.	Generate alternatives, use cognitive organisers deliberately and collaborate through clear roles and evidence. Key terms: brainstorming, SCAMPER, parallel thinking, White Hat.	Section notes, formative responses and one worked application. Outcomes: P3.1, P5.2.
22	Theory + formative response	Selecting and justifying concepts	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	Concept selection should not be a popularity contest or a defence of the first idea. Designers establish criteria and constraints, compare alternatives, identify trade-offs, combine useful features and explain why the selected direction offers the strongest fit for the need and context. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P3.1, P4.1, P4.3.
23	Applied studio / folio	Run and document a Six Thinking Hats session that produces several feasible Kitchen Companion directions.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of creativity and collaborative design to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P3.1, P5.2.
24	Project / practical / synthesis	Kitchen Companion	Run the Kitchen Companion Six Thinking Hats process and select a shared problem for investigation.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P3.1, P5.2.

Blocks 25-30

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
25	Theory + guided analysis	Design situation, brief and constraints / Target market, equity and accessibility	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect design situation, brief and constraints with target market, equity and accessibility.	Translate evidence about users and contexts into a clear brief, practical boundaries and criteria that guide testing. Key terms: design situation, design brief, target market, accessibility.	Section notes, formative responses and one worked application. Outcomes: P4.1, P4.3, P5.3.
26	Theory + formative response	Criteria to evaluate success	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	Criteria to evaluate success convert the need, research and brief into standards that can guide decisions and testing. Strong criteria are specific, relevant and supported. Some can be measured numerically; others need structured user or expert judgement. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P4.1, P4.3, P5.1.
27	Applied studio / folio	Build a user-needs, constraints and criteria matrix for the Kitchen Companion design.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of briefs, users and criteria to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P4.1, P4.3, P5.3.
28	Project / practical / synthesis	Kitchen Companion	Develop the Kitchen Companion brief, criteria and user profile; create initial soft prototypes.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P4.1, P4.3, P5.3.
29	Theory + guided analysis	Freehand sketching and annotation / Isometric, oblique and orthogonal drawing	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect freehand sketching and annotation with isometric, oblique and orthogonal drawing.	Use freehand, pictorial, orthogonal and digital communication to develop and explain ideas. Key terms: construction line, annotation, isometric, oblique.	Section notes, formative responses and one worked application. Outcomes: P5.2, P6.2.
30	Theory + formative response	Models, presentations and folio communication	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	Different communication methods reveal different information. A rough model can test scale or interaction. A CAD model can communicate geometry and support manufacture. A presentation can explain reasoning to an audience. A folio should connect these artefacts into an evidence trail. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P5.2, P6.2.

Blocks 31-36

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
31	Applied studio / folio	Produce an annotated concept sheet containing a freehand idea, a pictorial view and essential working information.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of graphical and design communication to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P5.2, P6.2.
32	Project / practical / synthesis	Kitchen Companion / Camping launch	Produce annotated concepts and technical drawings suited to communication and manufacture.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P5.2, P6.2.
33	Theory + guided analysis	CAD modelling and design intent / Rapid prototyping and 3D printing	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect cad modelling and design intent with rapid prototyping and 3d printing.	Build controlled digital models, transfer information to production and use rapid prototypes to test assumptions. Key terms: design intent, constraint, rapid prototyping, slicing.	Section notes, formative responses and one worked application. Outcomes: P6.2, P4.1, P4.2.
34	Theory + formative response	Tolerance, fit and the Kitchen Companion	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	Tolerance describes allowable variation from a specified size. Clearance is the intentional gap between mating parts. The Kitchen Companion brief nominates a 0.2 mm tolerance for moving parts, but the authorised value still needs to be interpreted and tested using the actual printer, material, orientation and geometry. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P4.1, P4.2, P4.3, P6.2.
35	Applied studio / folio	Create and document a 0.2 mm tolerance test before committing the Kitchen Companion final print.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of cad and rapid prototyping to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P6.2, P4.1, P4.2.
36	Project / practical / synthesis	Kitchen Companion	Develop CAD models and run 0.2 mm tolerance test prints for moving or fitted parts where relevant.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P6.2, P4.1, P4.2.

Blocks 37-42

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
37	Theory + guided analysis	Material selection and evidence / Manufacturing processes and scale	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect material selection and evidence with manufacturing processes and scale.	Select resources through evidence, plan fair tests and use evaluation to refine prototypes before final production. Key terms: property, workability, manufacturing process, jig.	Section notes, formative responses and one worked application. Outcomes: P4.2, P4.3, P6.1.
38	Theory + formative response	Prototype testing and continual evaluation	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	A prototype is valuable because it reduces uncertainty. Tests should correspond to criteria and control relevant variables. User feedback can reveal comfort, understanding and preference, while performance tests can measure function, strength, stability, durability or accuracy. Evaluation continues as evidence is collected. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P4.3, P5.3.
39	Applied studio / folio	Complete one controlled material or feature test and document the decision it changes.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of testing, materials and evaluation to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P4.2, P4.3, P6.1.
40	Project / practical / synthesis	Kitchen Companion completion / Camping launch	Test materials, prototypes and function; interpret results and modify the Kitchen Companion design.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P4.2, P4.3, P6.1.
41	Theory + guided analysis	Identifying a genuine camping need / From situation to design brief	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect identifying a genuine camping need with from situation to design brief.	Identify a genuine camping need and convert evidence, constraints and project criteria into a feasible compact product direction. Key terms: identified need, target market, design situation, design brief.	Section notes, formative responses and one worked application. Outcomes: P1.1, P4.1, P5.3.
42	Theory + formative response	Camping proposal and degree of difference	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	A proposal explains the direction the project will explore and why it deserves development. Its degree of difference is the meaningful improvement or distinction from existing products. Difference has value only when it better addresses the identified need, not when novelty is added for its own sake. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P4.1, P5.3.

Blocks 43-48

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
43	Applied studio / folio	Investigate a camping problem, define a target market and develop a justified proposal using current task requirements.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of camping design project to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P1.1, P4.1, P5.3.
44	Project / practical / synthesis	Camping Environment - need and proposal	Launch the Camping Environment task: identify and justify a genuine need, target market and feasible proposal.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P1.1, P4.1, P5.3.
45	Theory + guided analysis	Action plans, time plans and milestones / Finance and resource management	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect action plans, time plans and milestones with finance and resource management.	Use action, time, finance, resource and WHS planning as active decision tools during project development and production. Key terms: action plan, time plan, finance plan, unit cost.	Section notes, formative responses and one worked application. Outcomes: P4.2, P5.1.
46	Theory + formative response	WHS, risk controls and production readiness	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	WHS involves more than wearing personal protective equipment. The designer and producer should identify hazards in materials, tools, processes and the work environment, assess risk, use the strongest reasonably practicable controls and follow current school procedures and training. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P4.2, P5.1.
47	Applied studio / folio	Construct an integrated action, time, finance, resource and risk plan for the camping project, then update it after a simulated disruption.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of project management and safe production to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P4.2, P5.1.
48	Project / practical / synthesis	Camping Environment - management and production readiness	Finalise action, time, finance, resource and WHS plans before production; confirm teacher approvals.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P4.2, P5.1.

Blocks 49-54

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
49	Theory + guided analysis	Production sequence and quality assurance / Industrial and commercial production links	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect production sequence and quality assurance with industrial and commercial production links.	Plan and document a controlled production sequence that links workshop decisions to industrial and commercial practice. Key terms: production sequence, quality assurance, industrial setting, commercial setting.	Section notes, formative responses and one worked application. Outcomes: P4.2, P6.1.
50	Theory + formative response	Recording practical skills and production decisions	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	Production evidence should allow another person to understand what was done, why it was done, what result was observed and what followed. Photographs are useful only when selected and captioned to show a decision, process, quality issue, modification or skill. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P4.2, P5.2.
51	Applied studio / folio	Develop a production plan with process trials, quality checkpoints, evidence captions and an industrial/commercial comparison.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of manufacturing, quality and production evidence to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P4.2, P6.1.
52	Project / practical / synthesis	Camping Environment - production and quality	Produce the camping solution with planned quality checkpoints and concise work-in-progress evidence.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P4.2, P6.1.
53	Theory + guided analysis	Ongoing and final evaluation / Marketing and commercial viability	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect ongoing and final evaluation with marketing and commercial viability.	Evaluate the completed solution and communicate a credible market position using evidence rather than unsupported claims. Key terms: final evaluation, limitation, marketing mix, commercial viability.	Section notes, formative responses and one worked application. Outcomes: P2.2, P4.3, P5.2.
54	Theory + formative response	Life-cycle thinking and responsible design claims	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	A product's impact is distributed across raw-material extraction, processing, manufacture, transport, use, maintenance and end-of-life. Designers should avoid treating one recycled component or low-waste process as proof that the whole product is sustainable. Claims need scope, evidence and acknowledgement of trade-offs. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P2.2, P4.3.

Blocks 55-60

B	Type	Focus	Teaching and learning	Syllabus content	Evidence / outcomes
55	Applied studio / folio	Complete a criteria-based evaluation, life-cycle review and qualified marketing proposal for the camping product.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of marketing, sustainability and final evaluation to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P2.2, P4.3, P5.2.
56	Project / practical / synthesis	Camping Environment - evaluation and communication	Complete criteria-based testing, final evaluation, life-cycle review and a qualified marketing proposal.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P2.2, P4.3, P5.2.
57	Theory + guided analysis	Connecting the Preliminary course / Responding to command verbs and stimuli	Explicit teaching and worked comparison. Students read the two sections, analyse examples and begin the linked knowledge checks. Use the module visual to connect connecting the preliminary course with responding to command verbs and stimuli.	Integrate Preliminary knowledge, practise evidence-rich responses and carry disciplined project habits into the HSC course. Key terms: synthesis, trade-off, command verb, stimulus.	Section notes, formative responses and one worked application. Outcomes: P1.1, P4.3, P5.2.
58	Theory + formative response	Readiness for the HSC course and Major Design Project	Teach the third section, complete its ten-question check and model a justify response using Read-Select-Explain-Check. Students save one concise written response.	The HSC course applies and synthesises Preliminary learning through innovation study and the Major Design Project. Year 11 does not require students to preselect an MDP. It should build reliable habits: identifying a genuine need, using ethical research, managing scope, testing risk early, documenting decisions and evaluating honestly. Command-verb and evidence practice are embedded.	Question feedback, saved written response and misconception correction. Outcomes: P4.3, P5.1, P5.3.
59	Applied studio / folio	Complete a course audit, extended-response practice and MDP-readiness reflection based on evidence from the year.	Students apply the module ideas in a bounded activity, compare evidence, receive targeted feedback and save only the most useful evidence to the practice or formal folio as directed.	Application of preliminary synthesis and year 12 bridge to a project or unfamiliar design context.	Completed applied task, decision note and selected folio evidence. Outcomes: P1.1, P4.3, P5.2.
60	Project / practical / synthesis	Course synthesis and transition	Complete course revision, response practice, evidence audit and transition reflection for the HSC course.	Project learning is integrated with current teacher-approved instructions, available resources and local WHS controls. Formal assessment requirements are not altered by this program.	Teacher-selected checkpoint, practical or communication evidence and ongoing evaluation. Outcomes: P1.1, P4.3, P5.2.

Source register and control boundary

Authority order: current NESA syllabus and ACE requirements → current school assessment/task documents → current teacher-approved project, practical and WHS instructions → course support materials → this program/site.

Source	Used for	Status / boundary	Link
Design and Technology Stage 6 Syllabus (2013) - official course page Official syllabus authority	Course requirements, Preliminary/HSC scope, project requirements and official course boundary	Current syllabus taught in Years 11-12 at build date	Open source
Year 11 Design and Technology authorised Google Drive folder School source collection	Task notices, project briefs, worksheets, media and teacher resources	Teacher-controlled	Open source
2026 Preliminary Task 1 - Research Assignment Formal school assessment notice	Research Assignment project page, confirmed 35% weighting, outcomes and communication requirements	2026 source record - current notice remains authority	Open source
Year 11 Design and Technology - Project 1: The Kitchen Companion Teacher-approved course project brief	Collaborative design, Six Thinking Hats, CAD, 3D printing, 0.2 mm moving-part tolerance and eight-page group folio	Source brief	Open source
2026 Preliminary Task 2 - Camping Environment Formal school assessment notice	Camping project, confirmed 40% weighting, A\$30 construction limit, compact/marketable criteria and MDP-aligned folio structure	2026 source record - current notice remains authority	Open source
Design Technology Preliminary Teacher Answer Booklet Teacher-authored course support	Course terminology, command verbs, exam response quality, design factors, research, WHS, CAD/CAM/CNC, sustainability and evaluation	Indicative/model answers; not the only acceptable answers	Open source
Intro to Basic Sketching Teacher-curated resource folder	Graphical communication and sketching practice	Drive permissions apply	Open source
CAD competency check Teacher-curated resource folder	CAD readiness and evidence	Drive permissions apply	Open source
Isometric and Oblique Technical Drawing guide Teacher-curated Drive resource	Technical drawing support; not reproduced by this site	Use within school permissions	Open source
Isometric Drawing Guide video Teacher-curated Drive resource	Technical drawing demonstration; not reproduced by this site	Use within school permissions	Open source
OnGuard safety resources School safety resource folder	Links only; site does not replace induction, SOPs or supervision	Current local procedures and teacher approval remain authority	Open source
Market Research 2024 presentation Teacher-curated learning resource	Primary/secondary and market research support	Drive permissions apply	Open source
Factors Affecting Design 2024 presentation Teacher-curated learning resource	Design factors and trade-off support	Drive permissions apply	Open source
Finance Plan worksheet Teacher-curated learning resource	Project cost and resource planning	Drive permissions apply	Open source
The 4 Ps resources Teacher-curated learning resource folder	Product, price, place and promotion	Drive permissions apply	Open source

Deliberate exclusions

- Student folios, student names and assessed student products were not used as site or program content.
- The supplied Stage 6 textbook was not reproduced.
- The Year 11 assessment schedule PDF was not interpreted; readable task notices are the only formal task weightings represented.
- The program does not replace OnGuard, local SOPs, induction, supervision, equipment approval or current risk controls.
- Year 12 detail remains provisional until the authorised HSC site and program are built.
